

ELECTRONIC ARTS SOFTWARE END USER LICENSE AGREEMENT FOR THE EA DOWNLOAD MANAGER

This End User License Agreement ("License") is an agreement between you and Electronic Arts Inc. ("EA"). This License governs your use of this application and all related software, documentation, and updates and upgrades that replace or supplement the application and are not distributed with a separate license (together, the "Application").

By installing or using The APPLICATION, you consent to be bound by this LICENSE. If you do not agree to all of the terms of this LICENSE, then do not install or use the APPLICATION. IF YOU INSTALL the Application, the terms and CONDITIONS of this LICENSE ARE fully accepted by you.

1. License Grant and Terms of Use.

- A. Grant.** EA grants you a personal, non-exclusive license to install and use the Application for your personal, noncommercial use solely as set forth in this License and any accompanying documentation. Any commercial use is prohibited. You are expressly prohibited from sublicensing, renting, leasing or otherwise distributing the Application or rights to use the Application. The term of your license shall commence on the date that you start to download, install or otherwise use the Application, and shall end on the earlier of the date that you dispose of the Application; or EA's termination of this License.
- B. Copies.** You may download the number of copies allowed by the Application's digital rights management from an authorized source. The number of copies that you can download during a consecutive period of days may be limited. You may use only one copy of the Application at any given time. You may not make a copy of the Application available on a network where it could be used by multiple users at the same time. You may not make the Application available over a network where it could be downloaded by multiple users. For more information concerning the digital rights management that applies to the Application, please review the terms accompanying the distribution of the Application. Your license will terminate immediately if you attempt to circumvent digital rights management or other terms and conditions that apply to the Application or the software delivered through the Application.
- C. License Validation.** The Application is required to validate the license for certain products distributed by EA. You acknowledge and agree that the Application will automatically validate license rights for some or all EA products without separate notice to you. This means that in order to use the Application and certain EA products, you must leave the Application installed on your computer and maintain a connection to the Internet. You acknowledge and agree that the Application may use information regarding your computer and your use of the Application to validate your license rights and to update the Application. We may use this information to improve our products and services and may disclose this information to others for that purpose, but not in a form that personally identifies you. You also agree that the Application may automatically download and install updates that EA deems necessary. You acknowledge that any obligation EA may have to support the previous version(s) may be ended upon the availability of the update.
- D. Reservation of Rights and Restrictions.** The Application is licensed, and not sold, to you for use only under the terms of this License. Except as expressly licensed to you herein, EA reserves all right, title and interest in the Application and all software delivered through the Application (including all characters, storyline, images, photographs, animations, video, music, text), and all associated copyrights, trademarks, and other intellectual property rights therein. The License is limited to the intellectual property rights of EA and its licensors in the Application and does not include any rights to other patents or intellectual property. Except, and only to the extent that may be permitted under applicable law, you may not decompile, disassemble, or reverse engineer the Application by any means whatsoever, or alter, modify, enhance, or create a derivative work of the Application. You may not remove, alter, or obscure any product identification, copyright, or other intellectual property notices in the Application or software delivered through the Application.

- 2. Consent to Use of Data.** You agree that EA may collect, use, store and transmit technical and related information that identifies your computer (including the Internet Protocol Address), operating system and application software and peripheral hardware, that may be gathered periodically to facilitate the provision of software updates, dynamically served content, product support and other services to you, including online play. EA may also use this information in the aggregate and, in a form which does not personally identify you, to improve our products and services and we may share that data with our third party service providers. IF YOU DO NOT WANT EA TO COLLECT, USE, STORE, TRANSMIT OR DISPLAY THE DATA DESCRIBED IN THIS SECTION, PLEASE DO NOT INSTALL OR USE THE APPLICATION.

- 3. Consent to Public Display of Data.** When you use the Application online, EA and its affiliates may also collect, use, store, transmit and publicly display statistical data regarding game play when you use the Application online (including scores, rankings and achievements), or to identify content that is created and shared by you with other players. Data that personally identified you is collected, used, stored and transmitted in accordance with EA's Privacy Policy located at privacy.ea.com.

- 4. Termination.** This License is effective until terminated. Your rights under this License will terminate immediately and automatically without any notice from EA if (i) you fail to comply with any of the terms and conditions of this License; or (ii) EA ceases to support the Application. Promptly upon termination, you must cease all use of the Application and destroy all copies of the Application in your possession or control. EA's termination will not limit any of EA's other rights or remedies at law or in equity. Sections 2-10 of this License shall survive termination or expiration of this License for any reason.

5. **Disclaimer of Warranties.** TO THE FULLEST EXTENT PERMISSIBLE UNDER APPLICABLE LAW, THE APPLICATION IS PROVIDED TO YOU "AS IS," WITH ALL FAULTS, WITHOUT WARRANTY OF ANY KIND, AND YOUR USE IS AT YOUR SOLE RISK. THE ENTIRE RISK OF SATISFACTORY QUALITY AND PERFORMANCE RESIDES WITH YOU. EA AND EA'S LICENSORS (COLLECTIVELY EA FOR PURPOSES OF THIS SECTION AND SECTION 6) DO NOT MAKE, AND HEREBY DISCLAIM, ANY AND ALL EXPRESS, IMPLIED OR STATUTORY WARRANTIES, INCLUDING IMPLIED WARRANTIES OF MERCHANTABILITY, SATISFACTORY QUALITY, FITNESS FOR A PARTICULAR PURPOSE, NONINFRINGEMENT OF THIRD PARTY RIGHTS, AND WARRANTIES (IF ANY) ARISING FROM A COURSE OF DEALING, USAGE, OR TRADE PRACTICE. EA DOES NOT WARRANT AGAINST INTERFERENCE WITH YOUR ENJOYMENT OF THE APPLICATION; THAT THE APPLICATION WILL MEET YOUR REQUIREMENTS; THAT OPERATION OF THE APPLICATION WILL BE UNINTERRUPTED OR ERROR-FREE, OR THAT THE APPLICATION WILL BE COMPATIBLE WITH THIRD PARTY SOFTWARE OR THAT ANY ERRORS IN THE APPLICATION WILL BE CORRECTED. NO ORAL OR WRITTEN ADVICE PROVIDED BY EA OR ANY AUTHORIZED REPRESENTATIVE SHALL CREATE A WARRANTY. SOME JURISDICTIONS DO NOT ALLOW THE EXCLUSION OF OR LIMITATIONS ON IMPLIED WARRANTIES OR THE LIMITATIONS ON THE APPLICABLE STATUTORY RIGHTS OF A CONSUMER, SO SOME OR ALL OF THE ABOVE EXCLUSIONS AND LIMITATIONS MAY NOT APPLY TO YOU.
6. **Limitation of Liability.** TO THE FULLEST EXTENT PERMISSIBLE BY APPLICABLE LAW, IN NO EVENT SHALL EA BE LIABLE TO YOU FOR ANY PERSONAL INJURY, PROPERTY DAMAGE, LOST PROFITS, COST OF SUBSTITUTE GOODS OR SERVICES, OR ANY FORM OF INDIRECT, SPECIAL, INCIDENTAL, CONSEQUENTIAL OR PUNITIVE DAMAGES FROM ANY CAUSES OF ACTION RELATED TO THIS LICENSE OR THE APPLICATION, WHETHER ARISING IN TORT (INCLUDING NEGLIGENCE), CONTRACT, STRICT LIABILITY OR OTHERWISE, WHETHER OR NOT EA HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGE. SOME JURISDICTIONS DO NOT ALLOW THE LIMITATION OF LIABILITY FOR DEATH, PERSONAL INJURY, FRAUDULENT MISREPRESENTATIONS OR CERTAIN INTENTIONAL OR NEGLIGENT ACTS, OR VIOLATION OF SPECIFIC STATUTES, OR THE LIMITATION OF INCIDENTAL OR CONSEQUENTIAL DAMAGES, SO SOME OR ALL OF THE ABOVE LIMITATIONS OF LIABILITY MAY NOT APPLY TO YOU. In no event shall EA's total liability to you for all damages (except as may be required under applicable law) exceed the amount actually paid by you for the Application.
7. **Limitation of Liability is a Material Term of this License.** You agree that the provisions in this License that limit liability are essential terms of this License. The foregoing limitations of liability apply even if any remedies described in this License fail in their essential purpose.
8. **Severability and Survival.** If any provision of this License is illegal or unenforceable under applicable law, the remainder of the provision shall be amended to achieve as closely as possible the effect of the original term and all other provisions shall continue in full force and effect.
9. **U.S. Government Restricted Rights.** If you are a government end user, then this provision applies to you. The software provided in connection with this License has been developed entirely at private expense, as defined in FAR section 2.101, DFARS section 252.227-7014(a)(1) and DFARS section 252.227-7015 (or any equivalent or subsequent agency regulation thereof), "commercial items," "commercial computer software" and/or "commercial computer software documentation." Consistent with DFARS section 227.7202 and FAR section 12.212, and to the extent required under U.S. federal law, the minimum restricted rights as set forth in FAR section 52.227-19 (or any equivalent or subsequent agency regulation thereof), any use, modification, reproduction, release, performance, display, disclosure or distribution thereof by or for the U.S. Government shall be governed solely by this License and shall be prohibited except to the extent expressly permitted by this License.
10. **Injunctive Relief.** You agree that a breach of this License may cause irreparable injury to EA for which monetary damages would not be an adequate remedy and EA shall be entitled to seek equitable relief in addition to any remedies it may have hereunder or at law.
11. **Governing Law.** This License shall be governed by and construed (without regard to conflicts or choice of law principles) under the laws of the State of California as applied to agreements entered into and to be performed entirely in California between California residents. Unless expressly waived by EA in writing for the particular instance or contrary to local law, the sole and exclusive jurisdiction and venue for actions related to the subject matter hereof shall be the California state and federal courts having within their jurisdiction the location of EA's principal place of business. Both parties consent to the jurisdiction of such courts and agree that process may be served in the manner provided herein for giving of notices or otherwise as allowed by California or federal law. The parties agree that the UN Convention on Contracts for the International Sale of Goods (Vienna, 1980) shall not apply to this License or to any dispute or transaction arising out of this License.
12. **Export.** You agree to abide by U.S. and other applicable export control laws and agree not to transfer the Application to a foreign national, or national destination, which is prohibited by such laws, without first obtaining, and then complying with, any requisite government authorization. You certify that you are not a person with whom EA is prohibited from transacting business under applicable law.
13. **Third Party Notices.** Adobe® Flash® Player. Copyright © 1996 – 2006 Adobe Systems Incorporated. All Rights Reserved. Protected by U.S. Patent 6,879,327; Patents Pending in the United States and other countries. Adobe and Flash are either trademarks or registered trademarks in the United States and/or other countries.
14. **Entire Agreement.** This License constitutes the entire agreement between you and EA with respect to the Application and supersedes all prior or contemporaneous understandings regarding such subject matter. No amendment to or modification of this License will be binding unless made in writing and signed by EA. No failure to exercise, and no delay in exercising, on the part of either party, any right or any power hereunder shall operate as a waiver thereof, nor shall any single or partial exercise of any right or power hereunder preclude further exercise of any other right hereunder. In the event of a conflict between this License and any applicable purchase or other terms, the terms of this License shall govern.

Epilepsy Warning

Please read before using this game or allowing your children to use it.

Some people are susceptible to epileptic seizures or loss of consciousness when exposed to certain flashing lights or light patterns in everyday life. Such people may have a seizure while watching television images or playing certain video games. This may happen even if the person has no medical history of epilepsy or has never had any epileptic seizures. If you or anyone in your family has ever had symptoms related to epilepsy (seizures or loss of consciousness) when exposed to flashing lights, consult your doctor prior to playing.

We advise that parents should monitor the use of video games by their children. If you or your child experience any of the following symptoms: dizziness, blurred vision, eye or muscle twitches, loss of consciousness, disorientation, any involuntary movement or convulsion, while playing a video game, discontinue use IMMEDIATELY and consult your doctor.

Precautions to Take During Use

- Do not stand too close to the screen. Sit a good distance away from the screen, as far away as the length of the cable allows.
- Preferably play the game on a small screen.
- Avoid playing if you are tired or have not had much sleep.
- Make sure that the room in which you are playing is well lit.
- Rest for at least 10 to 15 minutes per hour while playing a video game.

Installing the Game

Note: For system requirements, see electronicarts.co.uk.

To install (disc users):

Insert the disc into your disc drive and follow the on-screen instructions.

If the Autorun menu does not automatically appear, launch the installer manually in Windows® 7, Windows Vista™ or Windows XP by opening **Start > Run**, typing **D:\AutoRun.exe** in the text box, then clicking OK (substitute the correct letter of your CD/DVD-ROM drive if other than 'D:').

Once the game has installed you can launch it from the game's AutoRun menu or by locating the game through the **START** menu.

To install (EA Store users):

Note: If you'd like more information about purchasing direct downloads from EA, visit www.eastore.ea.com and click **MORE ABOUT DIRECT DOWNLOADS**.

Once the game has been downloaded by EA Download Manager, click the install icon that appears and follow the on-screen instructions.

Launch the game (once it is installed) directly from the EA Download Manager.

Note: If you've already purchased a title and would like to install it on another PC, first download and install the EA Download Manager on the other PC, then launch the application and log in with your EA account. Select the appropriate title from the list that appears and click the start button to download the game.

To install (third party online users):

Please contact the digital retailer through whom you purchased this game for instructions on how to install the game or how to download and reinstall another copy.

Starting the Game

To start the game:

Games on Windows Vista or Windows 7 are located in the **Start > Games** menu and on earlier versions of Windows in the **Start > Programs** (or **All Programs**) menu. (EA Store users must have the EA Download Manager running.)

Note: In Windows Vista Classic Start menu style, games are located in the **Start > Programs > Games > Games Explorer** menu.

Introduction

Is it time – to be Mayor?

Do you have the empire-building skills to develop a metropolis of soaring skyscrapers or the aesthetic sensibilities to create a city that delights the eye? Do you enjoy tinkering with an entire world – widening a river bed there, increasing a tax rate here – to see the effects on the inhabitants under your sway? Or do you want to get down and dirty with the Sims in your streets, taking on missions that have you hurtling down highways in a tank? Whether you tend to the god-like or mortal, *SimCity 4: Deluxe Edition* offers infinite opportunities for you to create (or destroy) the metropolis of your dreams!

SimCity 4: Deluxe Edition gives you power that extends from the god-like creation of mountainscapes to the adjustment of funding levels at a local primary school. You'd like a certain Sim to commute to work on a pogo stick? Thy will be done. You may create a mountain eyrie of high tech industry, or a bustling urban manufacturing centre. With *SimCity 4: Deluxe Edition*, you can even interconnect the two cities to trade jobs, goods and services. Whether you use your creativity to develop independent cities, or prefer to offer your Sims a larger view on life through interdependent communities, you must make your world a prosperous and desirable place for your citizens to live. It can be quite a challenge, but don't worry. If you get too frustrated with events, you can always unleash meteor showers upon your land.

How will you know if you are succeeding as Mayor? You have a myriad of information at your fingertips. Your city statisticians work tirelessly to provide you with data, graphs and reports that keep your finger on your city's pulse. You know in which corner of your city crime is at its worst, where the best-educated Sims live and which roads are most congested. But that's not all. With *SimCity 4: Deluxe Edition*, your Sims can contact you directly with their thoughts and feelings about your administration. If you are a *really* outgoing Mayor, you can interview passing Sims on the streets to get their views. Not content with just passers-by? Want even *more* impact on your Sims' lives? Import your favourite Sims from *The Sims™* to live in your city! If you haven't created your own Sims, we've provided some individuals for you to direct and follow as they go about their lives. Choose what they drive, which routes they use to get to work and where they live. Your Sims complain if you raise taxes. If they live near a source of unchecked pollution, they get sick. If they can't get a job, they move out of the city altogether! In the ideal city, your Sims work hard, die peacefully at a ripe old age and pass the torch to the next generation.

Ah, so you want *even more* direct contact with the lifeblood of your city? You are hard to please, Mayor, but the answer is here. You now have the ability to build increasingly complex and varied transportation networks – providing your city with arteries of commerce and productivity. Allow congestion to get out of hand, and watch the car wrecks pile up! And, Mayor, *you* may be causing some of those crashes. With *SimCity 4: Deluxe Edition's* all new **U-Drive-It** feature, you can accept missions for the betterment of your citizens, or cause mayhem in your city as you drive the streets, ply the waters or fly through the clouds in vehicles *you* pilot. Will you get Jenny to the hospital in time for her heart transplant, or are you aiding the evil Dr. Vu in his plot to spill toxic green ooze in the middle of downtown? Complete your mission successfully, Mayor, and you will be rewarded.

Be a hardworking saint of a Mayor, a corrupt Mayor or a Mayor who inflicts all the evils of the world on your poor, unsuspecting Sims. Regardless of your priorities, every decision you make has lasting implications for the society you create. Learn the intricacies of Mayoring through new tutorials provided in the game, and select from three levels of play difficulty. In no time at all, you will master the art of city building. From there, the only limit is your imagination. You've been elected, Mayor! Get to it!

Getting Started: Tips for New Mayors

New in Town?

This section provides you with a quick introduction to the art of Mayoring. If you're new to the city's top post, this information can help you get on your mayoral feet. If you're an incumbent, review this information for a refresher course on leading your incipient city into a prosperous future.

What Should You Know From The Start?

These detailed steps will help you get your city up and running.

Select an area for your city.

Double click on an undeveloped square in the region that strikes your fancy.

Incorporate your city.

Raise mountains and call forth the waters by terraforming your landscape, or just dive into your city. Click the Mayor Mode button when you're ready to incorporate your city. Enter your City and Mayor names and choose the EASY difficulty level. Then, click ESTABLISH CITY.

Plug in.

Select the Coal Power Plant from the Build Power Systems menu. Place it near the edge of your city so less pollution blows into town. The Coal Plant is a cost-effective but polluting power source.

Add industry.

Select Medium Density Industrial from the Zone Industrial menu. Drag out an industrial zone so it touches the power plant. Industrial buildings provide your Sims with jobs.

Be a homemaker.

Select Low Density Residential from the Zone Residential menu. Low density is less expensive than medium or high density, and higher density structures don't develop until your population can support them anyway. Drag out a residential zone a short distance away from the power plant and the industrial zone. It's smart to position houses away from the power plant and industries to minimise the effects of pollution.

Put your Sims on the road.

Select Roads from the Build Roads menu and drag a road from your R zone to your I zone so Sims have a way to get to and from work. Roads have a higher capacity and speed limit than the streets that are created automatically when you zone.

Add commerce.

Select Low Density Commercial from the Commercial Zone menu. Drag out a C zone between the I and R zones so that all the zones are connected. Power flows through zones, so all of your zones should now have power. Always remember to only zone what you need. Monitor your RCI Demand to gauge when it's time to zone more C.

Watch your budget.

Your main source of revenue is taxes. You need to increase your city's population and start making more Simoleons than you're spending within a few years of your city's "birth". You can play with tax rates, but raise them too much and you'll lower demand as people are scared off by your money-grabbing ways.

Monitor RCI demand.

The Residential, Commercial and Industrial (RCI) meters indicate which type of zones to add to continue to grow your city. Click on the meters for more details about demand in your city.

Review the Desirability Data View.

This view helps you work out which zones to place where. If you create a zone in an undesirable location, don't expect to see any structures spring up there.

Improve commute times.

If you're seeing car crashes, your Traffic Advisor is grumbling about gridlock or your My Sims are griping about their miserable commutes, it's time to think about upgrading your traffic systems. Upgrade your streets to roads, roads to avenues and avenues to highways. You might also want to consider building some public transport options such as buses, subways, ferries or rail.

Educate and vaccinate.

Add an Elementary School and Health Clinic in or near your residential zones, and make sure they're funded appropriately for the population they serve.

Fight fire with...

Quickly add a Fire Station when your first fire breaks out.

Police your streets.

Add a Police Station when your Public Safety Advisor complains about crime.

Make a clean sweep.

Placing a landfill (away from your R and C zones, of course) keeps your city streets tidy and your neatnik Sims smiling.

Network with your neighbours.

Make neighbour connections by dragging roads from your Industrial zones to the edge of the map. This stimulates industrial growth.

Reach for the skies.

When you have a nice positive cash flow and a sizeable population (definitely more than 1,000), add higher density zones (R, C and I) and a water system (pipes and pumps) to encourage the construction of larger, wealthier structures.

Where Can You Learn More?

This should get you started. You'll also find strategy hints scattered throughout this manual. Remember though, every Mayor has his or her own style. As you become more familiar with building cities, you will develop your own strategies. The possibilities for experimentation are endless.

As you refine your Mayoral skills, use these resources for further assistance:

- City Advisors** These devoted minions give you plenty of feedback as you build your city. Heed their advice, but be careful! Advisors often have their own needs in mind and may fail to see the big picture.
- Tutorials** Try the Getting Started, Terraforming, Making Money, Big Cit and Rush Hour Tutorials to familiarise yourself with the basics and beyond of SimCity 4: Deluxe Edition.
- SimCity.com** Always just a click away. Find helpful hints and tips and share your conundrums and discoveries with other Mayors.

Reference Guide – SimCity 4: Deluxe Edition

Some of you newly-elected Mayors may want to jump right in and grab the reins of your administration cold. Others might appreciate an introduction to the staff and resources that will support your tenure as Mayor. Read on for a complete rundown of the powers at your fingertips. Experienced Mayors may want to check out new features, or refresh themselves about certain aspects of the position.

Regions

Region Basics

A **Region** is a collection of cities that can be interconnected and interdependent. Your Sims can live in one city and work in another, so long as the two cities are adjacent and connected by road, rail or highway. Also, cities can buy or sell **resources** from one another (power, water or landfill space) as long as you have built the appropriate connections.

A **Region** can be comprised of both incorporated and unincorporated cities. Incorporated cities are those that have been developed and saved. Unincorporated city tiles are waiting for you to bring them to life. You can choose to play a **Region** as a conglomerate of interconnected cities, or as isolated communities.

Take over as Mayor in one of the existing cities, or begin building the community of your dreams from the ground up. Do you aim for a mountain eco-city that is a centre of high-tech industry, or are you thinking more manufacturing megalopolis? Will your Sims be archipelagoans or citizens of the land-bound plains? Ah... decisions, decisions. What you do now will affect how your city can develop in the future.

Saving Games

Before you begin to build a city, you need to decide upon a region for your new metropolis, as well as its location within that region. Once you've made this decision, whenever you save your city, you save its latest incarnation. If you play a city but choose not to save it, it reverts to the last saved version. Remember, since your cities can be interconnected, the location of a city relative to its neighbours is very important. You *can* move your city to a new location by using the **Import Tool**, but this can have a dramatic effect on the city's development – for better or worse.

Region View Options Panel

The **Region View Options Panel** allows you to load, create and delete regions. You may also change the way a region appears.

Create New Region

Click here to create a new **Region** from scratch. You can choose to begin with an ocean or land terrain.

Load Region

Click here to access any of the pre-built (and sometimes familiar) **Regions** supplied with *SimCity 4: Deluxe*. The regions you create and save are also stored here.

Delete Region

This option deletes the entire **Region**, along with every city in it.

Show City Names

This function turns the display of **City Names** OFF and ON.

Show City Boundaries

Click to display or hide the grid showing the **Boundaries** of your cities.

Satellite View

Satellite View gives you a bird's-eye view of your entire region, with both incorporated and unincorporated cities. The **Satellite View** is your default view. In previous versions of the game, this was your *only* region view. You can now toggle between the **Satellite View** and **Transportation Map** to survey your domain.

Transportation Map

Any savvy Mayor needs to know where ALL roads lead. This new feature makes it easy. Select the **Transportation Map** view of your region, and you see the entire transportation infrastructure that connects your cities. A map legend is provided.

Note: The transportation map only works for *Deluxe Edition* cities. For older cities, load and save them to view them in the new map.

Connect to SimCity.com

Did you think Mayors work in a vacuum? Not for a minute. For all the latest information, updates, news downloads and customisation tools related to *SimCity 4: Deluxe Edition* visit **SimCity.com**. Click on this button, and you are there. You don't even need to close out of your city! Communicate with *SimCity* experts and other Mayors by posting and reading messages on our bulletin board service, or download free additions to *SimCity 4: Deluxe Edition* such as landmarks, wallpapers and, yes, customisation tools. Never fear, the latest news and information related to *SimCity* is always only a click away.

Quit

Click here to quit *SimCity 4: Deluxe Edition* and return to your desktop.

City Panel

Want to explore the cities in your **Region**? When you click on one of the city tiles, the **City Panel** appears. This panel looks different depending on whether a city is *incorporated* (named and saved) or *unincorporated* (a blank slate).

Unincorporated City Panel View

Your region includes some **Unincorporated Cities**. This means that the city does not yet have a **Mayor**, a **Name**, or any **Residents** or **Businesses**. In other words, you are starting from scratch. When you click on an unincorporated city, this **City Panel View** appears.

Import City

If you want to replace an existing city tile with an already created and saved city from this or another region, or from the downloads folder, click the **Import City** button. This brings up the **Import City Dialog**.

This lists all of the regions currently available, as well as any city that can be imported to your chosen location. Cities come in three sizes – small, medium and large. You can only replace cities with other cities of equal size. As much as you'd like to try it, you can't see what happens when you try to drop Los Angeles into an area the size of a village. Sorry.

Click to expand the **Region** folder to check out its available cities for **Import**.

Click to contract the folder and hide the **Region's** contents.

Downloaded Cities

So you've downloaded a few cities from the **SimCity.com** website? Clever Mayor. These are automatically placed in a special folder called **Downloads** found in the **Region Import Dialog**. You must first **Import** a downloaded city into a **Region** – any region – before it can be played.

Delete City

Click here to delete a city file. Deleted cities are permanently removed, so use caution.

Play This City

You're ready to break ground on your new city? Click on the **PLAY CITY** button and let the adventure begin.

Incorporated City Panel View

Ah, now you have something to work with. **Incorporated Cities** are no longer just a glint in some Mayor's eye, they've become living, breathing entities – created and saved by you or someone else. The **Incorporated City Panel View** displays valuable information about your city, from its name to the number of jobs in Industry it supports.

The **Difficulty Level** of the city is indicated by the number of stars displayed below the **Mayor Name**. One star represents a beginner city, two stars indicates intermediate play and a city with three stars is for Mayors who enjoy living lives full of complexity.

Region Info

The **Region Info Panel** can be found at the bottom of the **Region View**. It displays the region's name and the combined population of ALL the cities in the region.

Playing A City

Ready to don your Mayoral suit and even take on god-like powers? How will you juggle the often conflicting needs of your developing city? Will your Sims think you are doing a super job, or is everyone packing up for parts unknown? This is it – where the Mayoring *really* begins. This section gives you a breakdown of all the tools you can use as you build and demolish your dream cities when playing.

Universal Control Panel

The **Universal Control Panel (UCP)** includes the ever-useful **Overhead Map**, **Camera Controls**, **Date**, **Query Tool**, **Route Query Tool**, **Simulation Speed Controls** and your **City Name** (just so you know where you are). You also have the **Hide Toolbars** button here, if you want to get away from control panel clutter.

Overhead Map

Navigation is easy with your **Overhead Map**. Click anywhere on this aerial view of your city to centre your **City View** on that location.

Date

This displays the current date experienced by the Sims in your city. Each city starts in the year "00" (it was a very good year), but regions can be comprised of cities from many different eras. Cities may have begun years ago, and may develop far into the future. The faster the **Simulation Speed** is set, the faster time passes. If you'd like to take a breather while you assess a certain situation, or ponder a weighty decision, just pause the simulation. Time stands still while you ruminate.

By holding your cursor over the date, you can check what time it is for your Sims.

The time of day is independent from **Simulation Speed** and always runs at the same rate. The sun rises and sets in accordance with the 24 hour clock, and morning and evening rush hours really *do* happen at rush hour.

Query Tool

This unassuming little tool can be one of the best ways for a Mayor to gather much needed information about conditions around town. The **Query Tool** can be used to obtain information on any structure within your city. There are two types of query: **Hover Query** and **Dialog Query**.

Hover Query

Click on the Query Tool and move your cursor over the structures in your city. As you scroll along, important information appears about each structure the cursor touches.

For **Residential**, **Commercial** and **Industrial** buildings you see the building name, the type of occupant and the top three conditions that currently have the most dramatic impact on the desirability of the area.

When you query other types of buildings, you see the name of the structure along with information about its functional capacity. The five icons that are displayed in these **Hover Queries** indicate whether the building is under-funded or over-capacity (in other words, is it efficient?). If you have fewer than five full icons, then you may want to rethink your mayoral strategy. If conditions really deteriorate (your teachers are being asked to reconstitute chalk dust as a money-saving measure), you may be facing a strike.

Whenever you wonder "What is that?" do a quick **Hover Query**. Even the smallest items in your city can be queried.

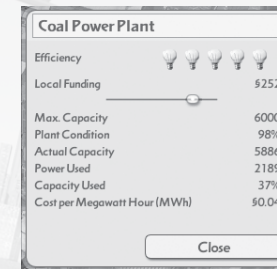

Dialog Query

If you want more detailed information on a certain building, the **Query Tool** is up to the task. Select the **Query Tool**, then click on the building that interests you. The **Dialog Query** window gives you customised information according to the type of building queried.

Hint: If you don't want to see a certain building fall prey to new development, click the **Make Historical** selection. If conditions warrant it, the building may be abandoned and become distressed, but it won't be lost in redevelopment. This designation works only for zoned RCI buildings, not for civic structures.

The **Dialog Query** for a house gives you information about its current occupancy, the wealth of the people living there and whether it is hooked up to your power and water systems, as well as details of the desirability factors of its neighbourhood. What else would a Mayor need to know?

Query a power station and you receive information about its maximum capacity and current usage. The **Dialog Query** includes another extremely useful function – adjustment of **Local Funding Levels**. If you find the power plant is over-funded given its current capacity, save some cash and ratchet the funding level down. **Local Funding Levels** can also be set in the **Dialog Query** window for schools, hospitals, police and fire stations.

Hint: When you build schools and hospitals, make sure you adjust the funding to match the number of attendees. In the query window for each school and hospital lower the local funding until the capacity is slightly higher than the number of people using the facility. If the workers strike, don't worry. Just increase the local funding until they stop striking.

Route Query

The **Route Query** tool provides information about your Sims' commuter and freight trips. As with the **Query** tool, choose the **Route Query** tool, then hold the cursor over buildings and click on buildings and roads.

- Hold the cursor over a building – see the number of trips to and from that building, as well as the way Sims are getting there.
- Click on the building – see the routes taken to and from the building.
- Hold the cursor over a transportation network – see the number of Sims that are passing through that network and their means of transport. You also see the routes for *all* of the Sims passing through that network.
- Click on a transportation network to see the routes for *all* of the Sims passing through that network.

This powerful tool can help you diagnose your transportation issues. If no one is using a bus stop, you can **Route Query** the houses in the area to see how they are getting to work. By placing another bus stop near their destination you can encourage them to use public transport. Cool.

Because there are so many ways for your Sims to get around, a legend for the route lines is provided when you select the **Route Query**.

Camera Controls

Want a change of scenery? Use these controls to change your **City View**.

- Rotate Camera Clockwise:** Rotates your camera clockwise.
- Rotate Camera Counterclockwise:** Rotates your camera anticlockwise.
- Zoom In:** Zooms your City View in one level each click. There are six levels. Get a closer look at what your Sims are up to. You might be surprised.
- Zoom Out:** Zooms your City View out one level each click. You need the big picture to get a real sense of your city's progress.

Simulation Speed Controls

Control how quickly time passes in your city using the **Simulation Speed Controls**.

- Click on the single arrow to play at turtle speed.
- Click the double arrow to play at rhino speed.
- You want cheetah speed? Click on (yikes!) the triple arrow

Click the pause button to stop time in its tracks. Click it a second time to restart the simulation at the previously set speed.

Newcastle

City Name

This is how you know whether you are dealing with Parisians or the less sophisticated. Might have an impact on your approach to mayoring.

Hide Toolbars

If you'd like an unobstructed view of your city, you can use the **Hide Toolbars** button to toggle the **Universal Control Panel** ON/OFF. You can still use the **Hotkeys** to get things done (for Hotkey reference, see page 78).

Play Mode

The buttons that encircle the **Universal Control Panel** are your portals to different ways you can interact with your city. Each mode is described in detail below.

God Mode – Terraform, destroy, play with day and night cycles and more. In an unincorporated city, **God Mode** is the only available play mode.

Mayor Mode – Administration central. You need to be in **Mayor Mode** to incorporate your city, build your city's infrastructure, adjust budgets and make policy decisions.

My Sim Mode – Import Sims from *The Sims*, or create characters on the spot. You also access the **U-Drive-It** function from **My Sim Mode**, where you can drive special Mayoral **Missions** and meet your Sims on the streets. Use this mode to make decisions that have a more personal effect on some of your citizens.

Pre-Incorporated City Tools

You want to work with a pristine landscape? The artist in you calls for a blank slate? Then come and enter the world of the unincorporated city – virgin territory. When you start from scratch in your city-building endeavours, the tools at your disposal are different than those available for an incorporated city. You can spend all the time you like making mountains or softening beaches – moulding the land that will serve as the foundation for the great metropolis to come. Best of all, it's free. Take advantage of your god-like powers to shape terrain now, because once your city is incorporated, being god-like costs a LOT of money.

God Mode

In the beginning, there are no roads, Mayors, solar energy plants or populous Sims. Hear that wind blowing? It's just you and the land. Until you have

incorporated your city, **God Mode** is the only mode you've got. This is not a bad thing. The pre-incorporated **God Mode** has a lot going for it. A listing of your powers follows.

Terraform Tools

Your first task in the creation of a new city is to shape its terrain. This is called *terraforming*. **God Mode** provides you with all the tools you need to become an accomplished landscape artist. Some Mayors may find themselves spending more time terraforming than building roads. Although each terraforming tool is unique, there are some universal functions.

Zoom Level

Use zoom levels to adjust the size and strength of **Terraforming Tools**. The further out the zoom, the larger the area affected and the stronger the tool. Working at a closer zoom gives the terraformist increased precision to make subtle adjustments in the landscape.

SHIFT Key

Another way to boost the size and strength of a **Terraforming Tool**'s effects is to hold the **SHIFT** key while using the tool. When you release the **SHIFT** key, the effects return to normal.

CTRL Key

Hold the **CTRL** key while using a tool to reduce the size and strength of its effects. Release the **CTRL** key, and the effects return to normal.

SHIFT + 1 to 0

The scope of each **Terraforming Tool** can be adjusted by using the **SHIFT** key in combination with the number keys (1 to 0). Select a **Terraforming Tool**, press **SHIFT + 1** to make the tool's scope very small, or **SHIFT + 0** to make its scope very large. The **SHIFT** key pressed with any number in between allows you to adjust the scope of the tool to a variety of areas. Click on the **Terraforming Tool** again to return it to normal.

SHIFT + F1 to F10

The strength of each **Terraforming Tool** can be adjusted by using the **SHIFT** key in combination with the **F** keys (**F1** to **F10**). Select a **Terraforming Tool**, and press **SHIFT + F1** to make the tool very weak, or press **Shift + F10** to make the tool very strong. Press the **SHIFT** key with any **F** key in between to choose a variety of strengths. Click on the tool again to return it to normal.

Make Mountains

Select the **Make Mountains** menu for the set of **Terraforming Tools** that allow you to raise everything from Andean peaks to gently sloping hills.

Mountain

Raise huge peaks.

Hill

Raise soft rolling hills.

Mesa

Create flat-topped mesas. Hold the mouse button in one location for best results.

Steep Hill

Create hills with a steep slope.

Cliffs

Create cliffs with sharp ridges.

Gouge Valleys

This set of **Terraforming Tools** allows you to lower terrain. Would you like to have Cheddar Gorge on the outskirts of town? If you want to see rivers or create lakes, just use these tools to lower the terrain to below sea level. You can then shape bodies of water as you see fit.

Valley

Create large valleys.

Steep Valley

Create a valley with steep sides.

Canyon

Create canyons lined with cliffs.

Shallow Valley

Create shallow valleys with gentle slopes.

Crater

Create craters. Click and hold the crater tool in one location for the best results.

Shallow Canyon

Create shallow canyons with sloped edges.

Level Terrain

This menu of **Terraforming Tools** allows you to level terrain for different effects.

Erosion

Click and drag over an area to create craggy mountains, coastlines or plains.

Plains

Gently level and smooth the terrain.

Quick Level Brush

Use this tool for a fast acting levelling effect. This tool levels all the terrain within the cursor radius to the elevation of the cursor point location.

Soften

Smooth and soften the terrain for nice soft beaches or gentle rises.

Plateau

Create level plateaus and smooth the terrain.

Seed Forests

Click and drag this tool over the land to seed it with trees and watch forests grow!

Create Fauna

Now how many Mayors do you know who can, with the flick of the wrist, cause rhinos to appear? After you have seeded those forests, decide

what sort of creatures you'd like your Sims to encounter while they hike the hills. Select an animal type and drag your cursor over your chosen habitat. Herds of your chosen fauna begin to gambol about. Drag your cursor over a wide area to get lots of creatures. If you hold the cursor in place, you spawn few or no animals.

Horses

Create herds of wild horses.

Woodland Animals

A doe, a deer, a female deer. And males. Create ungulates, mostly deer and moose.

Wild Animals

Create herds and flocks of wild animals. You want rhinos, you'll get rhinos.

Terrain Effects

Create wind-blown plains or make an adjustment to sea level. If you're in the market for a set of one-click global effects that change your entire city's terrain, we've got 'em.

Erode

Click to set the winds of time loose across your entire terrain. Click again until you reach the result you want.

Smooth

Each click applies a smoothing effect across the entire landscape. Click again until you have reached the desired result.

Raise Terrain Level

Each click uniformly raises the terrain elevation across the entire landscape.

Lower Terrain Level

Each click uniformly lowers the terrain elevation across the entire landscape.

Reconcile Edges

When you edit the terrain of a city, you may have forgotten to make your borders a perfect match with neighbouring city landforms. Oops. Not to worry. The **Reconcile Edges** tool adjusts the elevation of the edges of the active city so that you can deal with that sudden three thousand foot elevation gain (which might make that connecting highway into a bit of an engineering problem). When you click on the **Reconcile Edges** button, the areas that are affected are highlighted in red.

Any development under the red highlight will be destroyed, so do be careful when using this tool in an incorporated, populated city. If you decide that the reconciliation process is just too painful, click **Cancel** in the confirmation dialog. If matching your neighbours' terrains is worth it, click the **Accept** button.

Create Disasters

Had a bad day? You could do some yoga, or maybe... how about causing meteors to hail down upon your hapless Sims? There now. Feel better? This is definitely where your Mayoral powers might go to your head a little. You are able to cause **Disasters** both in unincorporated and incorporated cities. Perhaps you'd like a city built around ancient meteor scars and extinct volcanoes. Or maybe your day isn't really complete until you've had a little fun watching a giant robot stroll through town, wreaking havoc and smashing buildings. To add to the fun, you can direct your chosen devastation to any area in your city you desire. Joe Sim been a little whiny lately? Aim a lightning bolt at his garage. Who said civic leaders had to be polite?

Autosaurus Wrecks

Click on a location in the **City View** to send a monstrous anthropomorphised collection of vehicles into your city. Once **Autosaurus Wrecks** appears, you can control its direction by clicking and dragging your mouse in the direction you want it to go. You'll never look at monster trucks the same way again.

UFO

Since *SimCity 4*™, Mayors have made some otherworldly connections. Your destructive urges now have space aliens to do their bidding. Select the **UFO** disaster and click in the **City View** to select a destination for the mother ship. Once mama arrives, it spawns smaller UFOs. The aliens will even let you drive. Click-drag the mouse to the desired location and the spawned UFOs will follow. UFOs are pretty complex machines, though, so earthlings sometimes have some trouble steering. Even Mayors. Click on the location in the **City View** where you want your volcano to form. Release the mouse button and let the lava flow.

Volcano

Fire

Like to play with matches? Choose **Fire** as your mode of destruction, and your cursor becomes a torch. Add a little heat to your city with a click, hold and drag. The longer you hold down your mouse button, the larger the conflagration becomes.

Meteor

Like your fire to pack a little wallop? Try a meteor shower! You can control the direction of the meteor in flight by click-dragging the mouse in the direction you want the meteor to go. Once the meteor has achieved impact, you can load up another. Whee!

Robot Attack

Click on a location in the **City View** to send a ten-story metal monster on a devastating stroll through your city. This mighty mech jet-packs into town. Once he lands, you can control his robotic direction by clicking and dragging your mouse in the direction you want him to go.

Tornado

Click on a spot in the **City View** to unleash a tornado. Once released you can control the direction of the tornado by click-dragging the mouse in the direction you desire. Tornadoes dissipate quickly over water, so click on land for maximum devastation.

Lightning

Let the sparks fly. Click anywhere in your city to let loose an electrifying jolt.

Earthquake

Check out whether or not your buildings are up to scratch. Shake things up with an earthquake. Click and release anywhere in the **City View** for a tremor. The point where you click is the epicentre of the quake. If you click and hold the mouse button down, you increase the strength of the earthquake upon release.

REMEMBER!!! Disasters are hard on city budgets. Rebuilding doesn't come cheap. Be sure you are ready to bear the consequences before you toss a few meteors into that burgeoning commercial district, even if its crime rate *is* high.

Hint: Want the satisfaction of creating a disaster without the repercussions? It's easy. Save your city before you launch your desired form of mayhem. Watch as catastrophe occurs. Now exit the game without resaving your city. When you next visit this particular metropolis, it appears the disaster never even occurred. Guilt-free disasters! Who'd a thought it?

Control Day and Night

If you leave this alone, the sun sets and the moon rises according to the hours of the day. But you're the Mayor. You can use these tools to make sure the sun never shines, if you're a night owl.

Day Only

Want to try living in the land of eternal sun? Choose this option, and it's all sun, all the time. The 24 hour clock continues to run, but the sun shines even at midnight.

Night Only

You are a vampire Mayor, and permanent night makes ruling the city that much easier on your undead self. Daytime functions can be so annoying when you run the risk of being burned to cinders by a shaft of sunlight. The 24 hour clock continues to run, but the sun never shines.

Day and Night Cycle

You just can't get up without a sunrise? Clicking this button allows day and night to occur right on schedule.

Incorporating A City

Once you've sculpted your city's terrain so it's just the way you want it, you are ready to move on to the incorporation process. This is where things get serious.

Click on the **Mayor Mode** button, and you enter the **Establish City** dialog.

Commitment time! Enter the name of your city, the Mayor's name (your name, of course!) and choose the difficulty level for play.

Difficulty Setting

Mayors couldn't do *this* before. Now you can choose from three difficulty settings for city development.

Easy: You start with a ton of cash, see faster development and will find that making money (tax revenue builds up fast!) is much less challenging than in other settings. You'll also receive frequent messages from your advisors warning you when you've taken a "wrong" turn, along with what you can do to remedy the situation.

Medium: Not quite as much money to start with, but still plenty. Development is a little more challenging, and keeping your budget balanced takes some mayoral manoeuvring. Your advisors are still there to assist you, but might not be *quite* so helpful.

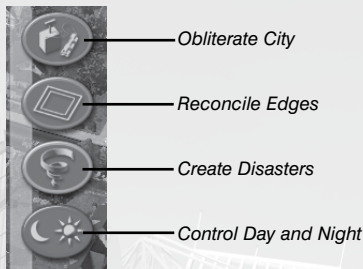

Hard: You need to be careful with your spending because your initial funds are pretty sparse. If you want a challenge, you've got it. Try to keep development going and your tax base growing. If you are successful, you know you have reached the highest levels of Mayordom.

Be very sure about the difficulty setting you've chosen *before* you establish the city. Once you accept it, there's no going back.

Post Incorporated City Tools

Once you establish a city, your god-like powers to shape the land are gone forever (or at least until you obliterate the place). So what! Now you can begin to design the layout and watch your city develop from an idea into reality. The following tools can help.

God Mode

After a city has been incorporated, many of the **Terraforming Tools** previously available in your **God Mode** toolbox are just no longer within your grasp. You can, however, still reconcile the edges of the city to its neighbouring cities, affect the day/night cycling and unleash disasters on your unsuspecting Sims. If you really miss your former power, you can obliterate your city and start all over again.

Obliterate City

If you've managed to run your city into the ground and want to start again, this is the button for you. **Obliterate City** removes all vestiges of the city and its inhabitants, but maintains the underlying terrain. When obliteration is complete, the City and Mayor names are removed, and the city is returned to its unincorporated state. It's as if it never happened. All of your god-like **Terraforming Tools** are available again, so you can terraform to your heart's content once more. When using this tool, your city is automatically saved. So be careful: true to its name, obliteration cannot be reversed.

Reconcile Edges

Reconcile Edges works in the same way for an incorporated city as it does for one that's unincorporated. Because an incorporated city is likely to have buildings and other structures that can be demolished when terrain modifications are made, be careful when using this tool. Remember that anything located under the red highlight will be destroyed. Zap.

Create Disasters

All of the disasters available to you in the unincorporated **God Mode** are also available to you in the incorporated **God Mode**, but they are way more fun when Sims are involved. For more information on these tools, see the **Pre-Incorporated City Tools** section.

Control Day and Night

Day and night control is available in incorporated cities. This tool works the same way as it does when the city is unincorporated. For more information see the **Pre-Incorporated City Tools** section.

Mayor Mode

Whether you've chosen to take the easy route or the barrier-strewn path, you are sure to find challenges galore as you inaugurate your administration. Your god-like terraforming powers may have dwindled, but the position of Mayor comes with plenty of muscle. Mayor mode affords you ample scope to exercise your megalomania, be it for good or evil.

Build roads! Add junctions to your highway system! Plop the Taj Mahal in your city centre! Beautify! Spend! Destroy! This is where the action is. The *real* challenge of *SimCity 4: Deluxe Edition* is to be a Mayor who keeps loyal citizens happy, healthy and prosperous. If you put your Sims first, budget wisely and keep your ears and eyes open to all kinds of information about your city, you will be on your way to achieving hero status in your city. If you sought out the position of Mayor mostly to line your own pockets, how long can you keep the city on the brink of disaster while you milk it dry?

As you build your city's infrastructure, you have a wealth of information available to keep tabs on your city – from your current Mayor Rating to trend data on education levels. Never forget to seek out the Sim's-eye view of what's going on. You might stop a crime wave in its tracks if you listen to the man, woman or child on the streets.

This section takes you through the basic tools available to you as Mayor. Good luck!

Landscape Tools

Now that you've established your city, you can still grow mountains – at a cost. Gods can sculpt terra firma for free, but this sort of landscaping comes with a price tag for Mayors, which may limit your ambitions. The mortal world also greatly reduces the scale and effect of these tools, compared to their powers in **God Mode**. But hey! All of the special universal functions available to you in the **God Mode Terraforming Tools** are available here (e.g., **CTRL** and **SHIFT** keys, the **SHIFT + 1** to **0**, etc.). You may plan to make your upscale neighbourhood even *more* upscale with a nice ridge formation, but beware! If you landscape *too* close to development, you destroy buildings and other structures. The following tools allow you to modify your city's terrain:

Raise Terrain

Create landscaped hills in your city.

Gouge Valleys

Create modest valleys.

Level Terrain

Level terrain within the coverage circle.

Plant Flora

Sign & Label Tools

Signs and Labels

Sign Tool

Select from several species to place saplings throughout your city. Once you have planted the young trees, watch your canopy grow!

For the map-minded Mayor, a new feature – create signposts throughout your city, or place labels on transportation networks, hills, valleys and bodies of water.

Label Tool

Click anywhere using your **Sign Tool** within your **City View** and type in the text you'd like to see on your newly created sign (*The Mayor Slept Here*). You can change what a sign says by choosing this tool and clicking on the sign's text to edit. Want to move a sign to a more visible location? Choose the sign tool and click-drag the sign to its new location.

Click on a location in the City View with the Label Tool. The Label Tool dialog appears. Type in the desired text for your label (e.g., *Sea of Anxiety*, *Valley of the Valley Girls*).

Like what you've written? Click on **Accept** to place the label. Once your label has been placed, you can drag it to a new location, if you so desire.

Placing Labels: When you drag a label onto a transportation network (road, avenue, rail etc.), the label automatically aligns to the network and changes colours. Cool, eh? Immortalise yourself by naming mountains and lakes in your honour. When dragging the label into place, you can adjust its orientation by using the **HOME** (rotate clockwise) and **END** (rotate anticlockwise) keys on your keyboard. As you rotate the viewing angle, labels always orient to be right-side up, which means a few positions won't work. To edit a label, choose the **Label Tool**, and click on the label to change text or remove it entirely.

Bulldoze Signs & Labels

Went a little crazy naming stuff after yourself? A teensy bit embarrassed? This very special bulldozer removes signs and labels, but no other structures. Phew. Problem solved.

Signs & Labels ON/OFF

You like your signs and labels, but at times you want to view the city sans signage? The power is at your fingertips. Click on this button once and they're gone. Click again, they reappear. You are god-like and magic.

Zone Tools

A city that is zoned well works well. Not only does zoning give your

Sims room to grow, your zoning decisions dictate *how* they grow. So, Mayor, put on your city planner hat and see how your strategies pan out. When you zone an area, you designate what kind of development can occur. Your Sims develop the appropriate buildings according to how you have zoned the land. Zone an area for residential structures and only Sim dwellings will be built there. Zone an area for medium- or high-density industrial and watch the smelters move in.

Density represents how many people you can pack into a building. By zoning lower density, you limit the size of the buildings that develop in your city. Zoning high density allows for skyscrapers, but is very expensive. Higher density buildings don't develop until you reach the following population thresholds:

Density	Population
Low	0
Medium	1,100
High	26,000

Hint: Don't zone high density residential or commercial early in the game. It is costly and you won't get high density development until your population exceeds 26,000. In other words, build out before you try to build up. Zoning density has no impact on the wealth of the residents or businesses that move into your city. (If you build it, they will not necessarily come.)

Hey, you say, this is easy! Hold on, Mayor. You thought you were ALL powerful? Not exactly. What actually develops in your **Residential**, **Commercial** and **Industrial** zones is up to your Sims. You are merely placing restrictions on types of buildings, kinds of businesses and zone densities. If you zone an area for High Density Residential development, don't be surprised if the high-rises don't immediately appear. Zones don't develop to their peak capacity until you have created the conditions that spur demand for those zones. Use your **RCI Demand Indicator** and your **Desirability Maps** to let you know if your zoning decisions are in line with the needs and desires of your Sims.

Hint: Your population is booming, and you've zoned for high density areas, but STILL no high rises? Check your water supply. Water is an unnecessary money drain as your city is newly developing, but once you hit the big time, your Sims demand a nice, clean supply of H2O.

Placing Zones

Choose your desired zone designation. Click and hold the mouse button down as you drag the mouse across tiles until you cover the area you wish to zone. You can zone a single tile with one click of the mouse button. Click and hold the mouse to fill areas between pre-existing roads with a zoned area. If there are no bounding roads, click and hold the mouse as you drag to create a zone of maximum size. Each lot created displays a little arrow indicating the front of the lot. Lot fronts must face a street or road to be connected to your transport network. You can affect the orientation of the lots when you zone by pressing the **ALT** key. Streets are automatically built within zones to make sure your Sims have access in and out of neighbourhoods to major routes. Eek! Have you zoned an area you were saving for landfill? Just press **ESC** before you release the mouse button. This cancels your zoning operation. Phew!

Hint: Try to zone in highly desirable locations. Use the **Desirability Data View** to determine what location is desirable to which group of Sims. Since this data is broken out by occupant type, you can pick the ideal location for each group you wish to take up residence in your city.

A final note – never confuse **zone** type with **occupant** type. **Low density residential** (zone type) is not the same thing as **low wealth residential** (occupant type). *Density* specifies building capacity limits, the difference between single family dwellings and huge apartment buildings. *Wealth* specifies standard of living for the residents. Low density zoning can allow for low, medium and high wealth residential development. Got that? So here's the rundown of zone types:

Residential

Density choices are:

Low Density

You see mostly single family homes being built.

Medium Density

This zone allows for smaller apartment buildings and condominiums.

High Density

We're talking anything from huge tenements to massive luxury high-rises.

Hint: Zone for low density development when your city is in the early stages of growth. It's much easier on your wallet, and you won't see taller, bigger buildings until your city increases in size and population anyway.

Commercial

And the density choices are:

Low Density

Watch cornershops, petrol stations and other small businesses grow.

Medium Density

This zone includes medium size office buildings and stores.

High Density

Large office buildings, mega-stores and skyscrapers.

Hint: One word: rezone. Commercial bigwigs showing an interest in the commercial district where the local newsgagents is the biggest concern going? You can rezone higher density zones of the same type over existing areas without destroying what's already there. When conditions are right, higher density buildings will develop alongside and over current structures.

Industrial

The envelope please... Yes, and the density choices are:

Agricultural Zone

Farms and only farms. No planned communities, no encroaching subdivisions. Just tractors, barns and crops. Moo.

Medium Density

This zone includes medium sized factories, warehouses, manufacturing plants and high tech industry.

High Density

Mega-industry. Large factories, incinerators or, if you've planned well, gleaming high-tech industrial complexes.

Hint: Zone your industrial areas near the edges of your city map and make a road or rail neighbour connection to reduce the length of freight trips. Industrial barons need to get their products around town and exported beyond city boundaries or their companies won't grow. Access to efficient transportation makes a zone more desirable for these ambitious souls.

Dezone

The **Dezone Tool** is available in any zoning type, after your density choices. Have you zoned and developed a certain area, but rethought your strategies? Use this tool to remove the zoned area, as well as the streets created when the original zoning went in.

Transportation Tools

If your Sims can't get there, they won't go. If your Sims can't go, your city won't grow. No city can function without an adequate transportation infrastructure. Sims must be able to get to their jobs in a reasonable amount of time, and businesses need to export their wares to other parts of Sim Nation. As Mayor, it is your responsibility to create an efficient, flowing, interconnected web of roads, avenues, streets, highways, railways, subways, bus routes, bridges and tunnels. Sounds easy, huh? It is a challenge, but you have some of the most skilled construction engineers in the world at your command. If you have the will, and the budget, you can build almost any kind of thoroughfare. Here are the tools you can use to build the transportation network that helps your city flow...or be slow.

Placing Routes

To place a road or any other transportation route, click on an origination point and drag to form a line. When you release the mouse, your road appears.

Transportation networks can follow straight or diagonal paths. To build an irregular or overall diagonal route, hold the **SHIFT** key down with your selected transport network tool. This will build a length of connected straight and diagonal route sections so that you can follow the desired overall path for your network.

If you don't provide street, road or avenue access to the lots in your zones, then the **No Car Zoned** is displayed. Eek!

If your Sims' commute takes so much time they never get to work, then you see the **No Work Zoned**. Argh!

Hint: If your Sims don't immediately begin to trundle along on your newly built route, don't despair! It takes Sims about a month to discover new ways to get around.

Build Roads

The bulk of your transportation needs are fulfilled with roads of one flavour or another. *SimCity 4 Deluxe* provides several options, depending on your city's ever-changing requirements.

Roads

More expensive than **Streets** (some of which are built for you when you zone an area), **Roads** have the benefit of higher capacity and speed limit. If you notice crowding and gridlock on your **Streets**, you can upgrade them by building **Roads** right on top.

Avenues

Avenues are quite a bit more expensive than either **Roads** or **Streets**, and take up twice as much space, but they more than make up for it with even higher capacity and a higher speed limit. You may need to demolish some buildings to fit them in, but **Avenues** are a great replacement for **Roads** that are jammed with traffic.

Hint: Traffic accidents are a symptom of congestion. You may enjoy rubbernecking for a while, but if your city stays congested, development stagnates and your Sims may begin to look for greener pastures.

One Way Roads

One Way Roads have no additional capacity over regular roads, but they do increase the efficiency of intersections, which can ease the burden of heavy traffic. Just make sure that you provide a way for your Sims to get both to and *from* work, or they won't go to work at all. Any excuse, that's all it takes.

Streets

These are cheap, comparatively, but **Streets** have the lowest capacity and speed limits of all your road options. When zoning, **Streets** are automatically built in zones so that Sims can drive out of their parking lots and driveways.

Hint: If pre-built streets interfere with your sense of control, you can send the auto-street function packing by holding the **SHIFT** key down while zoning and build your own streets.

Build Highways & Ramps

Highways are very expensive compared to **Streets**, **Roads** and **Avenues**, and tend to take up a lot of space, but their capacity is HUGE and their speed limits are high. **Highways** can be an important part of your planning as the population of your city inches towards the megalopolis category.

Ground Level Highways

Ground Level Highways might seem more cost effective than **Elevated Highways** at first, but building overpasses for roads that cross the highway can jack up the price fast in downtown areas. On the other hand, **Ground Level Highways** are a great choice for getting your citizens from their homes in the suburbs to the city centre.

Elevated Highways

Just build 'em on top! **Elevated Highways** are more expensive than **Ground Level Highways**, but the money you spend can be recouped as you can build the less expensive roads and streets underneath to bolster the efficiency of your network. If you have a lot of roads running perpendicular to your highway, such as in a downtown commercial district with a grid-like road network, **Elevated Highways** are often the way to go.

When two highways cross, do you want your Sims to be able to go from one highway to the other?

Ground Level Highway and Elevated Highway Cloverleaf

Elevated Highway Cloverleaf

That's where the handy **Cloverleaf** (junction) comes in. When you build intersecting highways, you are prompted to put in a **Cloverleaf**. If you balk at the price, you can always go back to the **Transportation Tools** menu and add one later. These structures take up lots of space, so make sure there's nothing underneath when you build.

Hint: Know where you need to site a cloverleaf, t-intersection, overpass onramp, or side onramp (see following sections for descriptions of these), but haven't had the time or money to build the highway yet? You can now place these structures *before* you build a highway. If you have selected one of these structures, but aren't sure that this is the best option for your network, use the **HOME** and **END** keys to cycle through your options.

Ground Level Highway and Elevated Highway T-Intersection

T-Intersections are nifty little engineering feats cooked up by your engineers and construction crews, Mayor. These are three-way intersections where one **Highway** transitions into another **Highway** that runs perpendicular to the first. **T-Intersections** come in several flavours: ground-ground, elevated-elevated and elevated-ground. Every Mayor can choose the **T-Intersection** that's right for them!

Ground Level Highway and Elevated Highway Overpass Onramp

You've built highways, but the only thing blowing by is wind? Before Sims can drive onto a highway, they need a way to get from the road to this transportation artery. For roads that run perpendicular to the highway, build an **Overpass Onramp** for access. If the road already exists when you build the highway, you are prompted to place an **Onramp**. Don't want or need one right now? You can go to the **Transportation Tools** menu to build one later.

Ground Level Highway and Elevated Highway Side Onramp

Need access from a road that runs parallel to the highway? Build a **Side Onramp**. Your construction engineers don't prompt you on this one, **Side Onramps** are only placed manually. You knew you had to do something to earn that big, fat salary, didn't you? It is easier to build the **Side Onramp** first, and then connect the road. If the road is already in place, make sure that it's two tiles away from the highway and straight to get a working connection.

Build Rails & Depots

When it comes to maintenance, **Rail** is cheaper than roads and is significantly more efficient at getting hordes of people from one place to another. Industrial areas tend to thrive when there is access to railways for transporting freight out of town (with the added benefit of keeping pesky freight trucks off the roads). When it comes to building railways that get used, placement is everything. Be wise, and do not squander the iron.

Rail

Rail lines can be used for both commuter traffic and freight trips. For your Sims to use all these wonderful tracks, they need access. Don't forget to build **Passenger** and **Freight Train Stations** if you want to see your network utilised. Build your **Stations** near origination and destination points for both commuters and freight users. Sims hate having to travel far to use public transport.

Passenger Train Station

Passenger Rail Stations are for your commuting Sims. Make sure you place stations in the centre of your residential areas *and* in central locations in your business districts. Otherwise they won't get much use. For industry to be successful, manufactured goods need to have a way to get out of town. If you rely on roads to satisfy this demand, freight lorries tend to compete with commuters for lane space – and nobody wins. Try this: place **Freight Train Stations** in the centre of your industrial development and run **Rail** lines from the station to the edge of the map. As with **Passenger Rail Stations**, manufacturers won't use your rail network unless there is a **Freight Train Station** for access. You just might encourage your industries to use **Rail** as their main means of transport, which frees up the **Roads** for you and your Sims.

Freight Train Station

Ah, ain't life grand. If you have really invested in building up your **Rail** system, you might want to cap it off with a **Grand Station**. These stations have several times the passenger capacity of small **Passenger Rail Stations**, and on top of that, they increase desirability for commercial office development.

Monorail

Monorail and **Monorail Stations** can add some panache to your town. **Monorail** takes up as much space as surface rail, but doesn't interfere with traffic because it passes right over the top of roads. This stylish transportation option is costly to install and maintain, but provides super high-speed travel.

Miscellaneous Transportation

Roads and rail won't necessarily be the only answer to your transportation needs. All large cities need to utilise public transport options in one form or another.

Bus Stop

Build **Bus Stops** to get your Sims out of their cars and into the mode of public transport, and add value to your roads and avenues. Be sure to strategically place your stations in both the heart of your residential neighbourhoods and work districts (both commercial and industrial) to make your Sims feel the walk to the stop is worth their while.

Hint: Use the **Route Query** tool to help you place bus, subway and elevated rail stations. These stations don't come with parking spaces, so your Sims have to walk to use them unless you place a **Public Parking Garage** nearby. Sims willingly walk only so far, and you need to make sure you place the stations within walking distance (usually about 10 tiles, depending on how lengthy their commute is). The **Route Query** tool shows you the major commuter routes in your city. Click on different roads with the tool to locate clusters of Sims that live near each other and also work in close proximity. These locations are where you want public transport stations, Mayor.

Elevated Rail and Elevated Rail Station

Elevated Rail is actually an above-ground extension of your **Subway** network. Think of your connected **Elevated Rail-Subway** system as a single *Rapid Transit* system. Rapid Transit runs trains much more frequently, and is much more efficient at moving lots of Sims quickly over short distances than surface rail systems. This makes it a good choice for mass transit in and around your city.

Elevated Rail is cheaper to build and maintain than **Subways**, but more expensive than surface rail. Like **Monorail**, **Elevated Rail** takes up the space of surface rail, but allows road traffic to pass uninterrupted below.

Hint: If you invest in an **Elevated Rail-Subway** system, you want to be sure that it is used to capacity. Sims walk to **Elevated** and **Subway Stations**, but putting a **Bus Stop** next door will encourage more distant Sims to use the system. If you build a **Public Parking Garage** next door to the station in a residential area, you might entice a lot of Sims to "park-and-ride". Now that's thinking, Mayor!

Subway-to-Elevated Rail Transition

Subway and **Elevated Rail** run the same trains and schedules, but when building your system you may find locations where it is best for your **Subway** train to emerge from the depths or your **Elevated** train to go underground. Perhaps the terrain is too steep for the "EI" and it's better to burrow below. That's where the **Subway-to-Elevated Rail Transition** comes in. Build one of these babies to smoothly link your **Subway** line to your **Elevated** line. Get really skilful with this kind of stuff, and you may well be on your way to earning an award from the Sim Society of Engineers. You never know.

Subway and Subway Station

Go tubing! **Subways** provide a great way for people to get to and from work, and since they are built below the earth's surface, they take almost no space away from development. Again, the placement of **Subway Stations** is critical. **Subways** are pricey, but if you are building a city to rival Tokyo or Mexico City, you'll probably need to go below for best flow.

Public Parking Garage Mass Transit (public transport) is a great alternative to driving, cutting down on traffic and pollution in your fair city. If you want your Sims to take greatest advantage of your beautiful public transport system, though, you need to take into account that Sims just don't like to walk that far. Eureka! **Public Parking Garages** to the rescue! Build a **Public Parking Garage** next to a suburban public transport station and serve a much larger area – and many more Sims – by letting them “park-and-ride”.

Hint: Make sure you build your **Public Parking Garages** in residential areas, the place where your Sims will use their cars to get to and fro from the station. Building a **Public Parking Garage** in work districts is a waste of money. You still need to build plenty of stations in work districts, as this is where your Sims will be on foot. They parked and rode, remember!

Toll Booth

Got lots of traffic but not much money? Hey, here's an idea! Turn that congestion into cash by strategically building a few toll booths. Every trip that passes through a toll booth puts Simoleons into your city's budget. Select the **Toll Booth** tool to build your little money-maker on any **Road, Street, Avenue** or **Highway** (straight segments only).

You knew it couldn't be that good, didn't you Mayor? Every silver lining has its cloud – sigh. **Toll Booths** will do nothing to help solve your traffic problems. In fact, they might make things worse. Being told they now have to pay to travel on routes they previously used for free also gets your commuting Sims a little resentful. Was that your **Mayor Rating**? Did it just go down?

Build Airports

If you want to see your commercial development go through the roof, then you need access to the skies. Without an **Airport** servicing your city, you won't see huge commercial districts develop. Make sure your **Airport** has good transportation access to your commercial zones, otherwise those white collar Sims won't be able to make their flights. Take into consideration that airports are large, noisy and generate a lot of traffic and air pollution. Neighbouring residential Sims might not be too happy with planes zooming low over their rooftops.

Unless you're a wizard at managing your funds – and who is – you are better served to build the **Airport** that meets your city's current needs. Three different **Airport** types are provided for you to choose from: **Landing Strip**, **Municipal Airport** and **International Airport**. Each may need to be expanded as your air traffic increases. Keep in touch with your **Transportation Advisor** – he requests necessary expansions when the time comes.

Water Transportation

If you have built a city on an ocean or large waterway, **Water Transportation** can serve the same purpose for commuter and freight transport as overland forms of travel do for landlocked communities.

Passenger Ferry Terminal/Car & Passenger Ferry Terminal

Building a bridge that spans a body of water can be very expensive. Constructing a **Ferry System** can often get you by until your city coffers can afford the more expensive alternatives. Place a **Ferry Terminal** on both sides of the water and connect them to a road system so that people can drive to and from the **Ferry**. There are two types of **Ferries**, one for pedestrian passengers only, and another for pedestrians and automobiles. **Ferries** of one type do not dock at a terminal for the other type, so make sure you set up your **Ferry System** with this in mind. Build at least two **Ferry Terminals** of the same type on the same body of water – or else no one takes the ferry. **Ferry** trips can take your citizens to adjacent cities that are built on the same body of water, making for very pleasurable commutes (according to Sim data sources)! Build **Bus Stops** and **Public Parking Garages** next to **Passenger Ferry Terminals** to encourage more use.

Are you a Mayor who encourages mega-industry? Hopefully, you've already built connections to your neighbouring communities. Another way to help get your industrial goods out of town is to provide a **Seaport** or two. This might not work if your city is situated inland – but you can always try. Just make sure that you build **Seaports** near industrial zones and provide good roads leading to them so that HGVs can get there in double quick time.

Marinas are not really about getting around, but more for your Sims' recreation. Building a **Marina** improves local residential desirability and – ta da! – provides you with new drivable water craft. Have fun, and don't forget your life-jacket!

Seaports

Marina

Bridges

So you built your city on a bay, hmmm. It was pretty once, but now it is one big commuter headache. Luckily you have the finest engineers in the land at your command, and the building of **Bridges** is within your grasp. Your headache may be on its way out, if you have the cash on hand for the cure.

To build a **Bridge** select a transportation network such a **Highway, Road, Avenue, Rail** or **Monorail** and drag a line so that it extends completely across the body of water. You can not build a Bridge while laying down **Streets**, or when building on a diagonal. Make sure that you extend the line onto plenty of land on each side of the water. If your engineers have made the correct calculations, the red line turns into a beautiful **Bridge**. When you release the mouse button, the **Bridge Selection Window** appears.

Choose from one of the available **Bridges**. If over water, use the **Bridge Height** slider to adjust the height of the bridge. Some **Bridges** have a minimum length requirement, so they may not appear on the selection menu. Make sure you provide enough room for ferries to pass under your new construction if they ply your waters. Click the **OK** button, and – VOILA! Maestro Mayor, you have a new **Bridge**.

Bridges can also be built to span areas with large slope changes on land – over a gorge, for instance.

Tunnels

Sometimes it's just easier to go under than over. And what's a good commute without a **Tunnel** or two to spice it up? When you attempt to build a transportation network over a hill, part of the preview line may turn green. If so, when you release the mouse button, that green section becomes a **Tunnel**. **Tunnels** can be created for **Roads**, **Avenues**, **One-way Streets**, **Rail** and both **Ground** and **Elevated Highways**.

Utilities Tools

Ah, the electrical hum of power lines, the echoing metallic “ping” of water starting to flow through underground pipes, the call of seagulls at the tip! As Mayor, you need to be sure your Sims are supplied with the bare necessities of life: power, water and somewhere to throw that dirty tissue. Ewww.

Build Power Systems

No Mayor gets far without providing power. Abraham Lincoln may have read by candlelight, but your Sims are not too interested in life off the grid. You can't start a city without a power supply. Want to try anyway? Watch.

See the **No Power Zot** show up over all your buildings and zones? You may enjoy seeing the little lightning bolts adorning your buildings, but your city will go nowhere fast.

At first, your power options are limited. You can power up by building a **Wind Power Plant**, a **Coal Power Plant**, a **Natural Gas Power Plant** or an **Oil Power Plant**. Each of these options has good stuff and bad stuff going for it. The **Coal Power Plant** may be the most cost effective, but it's also the biggest polluter. **Wind Power** is very clean, but doesn't have great capacity. **Oil** and **Natural Gas** fall in between as far as capacity and pollution go.

Hint: Think about putting your pollution-generating power plants, landfills and even your dirty industry in another city (you can do this in region play). Don't forget to set up connections and neighbour deals so that you can access jobs and services. Pollution doesn't travel well between cities, so you are left to concentrate on building nice, clean, desirable residential and commercial districts. Nice work if you can get it. If you do keep the dirt in town, try playing on a larger map and setting up different sectors for polluting and non-polluting development.

As Mayor, two things help you decide which plant to place: your monthly costs and the desires of your Sims. If you go with a polluting power source, then try to keep it far from your commercial and residential zones. Connect the plant to your zoned areas with a power line. Remember, power flows both through power lines and zoned areas. Zones and powerlines need to be within four tiles of another powered area to conduct electricity. Once you've built a plant, don't forget to use the **Query Tool** to check on the efficiency with which you are providing Sims power. As your city grows, alternative power sources become available.

These alternative sources are visible in the **Power Systems** menu but are greyed out until you have created the conditions in which they can be built. Take a look at the **Tool-tips** for these plants to determine what you need to do to earn the new power sources.

Build Water Systems

A look at the future? Demand for a public water supply is a sign of socio-economic growth, both for your city and your Sims. You don't need to build a **Water Supply System** early on in your city's development (Sims seem to be pretty handy at digging wells), but if you want Sims with Simoleons to spare to take up residence, you need to make sure their showers run good and hot. High wealth businesses (commercial services (CS\$\$\$), commercial offices (CO\$\$\$) and Industry high tech (I-HT) also require water. Any medium to high density development requires water, so if you intend to build a thriving megalopolis, don't skimp on the wet stuff.

Providing Water

First build a source – either a **Water Tower** or a **Water Pump**. **Water Towers** are cheaper but provide less water than the **Water Pump**. Back to the budget and city needs, Mayor! Which works best for you? Once you have a source, you need to build a delivery system. You have a crack team that can build **Water Pipe** in no time. You can even watch it being built in the nifty **Underground View**. Build pipe underneath the zones that need water. **Water Pipe** carries water six tiles beyond the pipe on either side. If your water supply runs short, the supply distance from the pipe shrinks and some Sims go without water until you rectify the problem. Do you really want John Sim to go without a bath for that long?

The **No Water Zot** shows up over any building that requires water but is not being supplied.

Hint: Don't bother providing water to your Sims until you are ready for high wealth residents or medium- and/or high-density development move in. Contrary to what you may think, no one else needs it. If you find that you aren't getting high wealth or medium- and/or high-density development, check to see that you are providing water.

Water Treatment Plants

Scum, germs and industrial waste are major factors in the amount of water that the towers and pumps can distribute to your Sims. And mega-industry isn't the only culprit. Although nice and pastoral, farms are one of the biggest sources of water pollution around. If you place a tower or pump in an area of high water pollution, its output dramatically decreases or even shuts down. Technology to the rescue! Clean up your water by building a **Water Treatment Plant** in highly polluted areas. As with your **Power Systems**, options for water structures increase as the size and quality of your city improves. Take a look at the greyed out entries in the **Water Systems** menu to see what you need to do to make the new options a possibility.

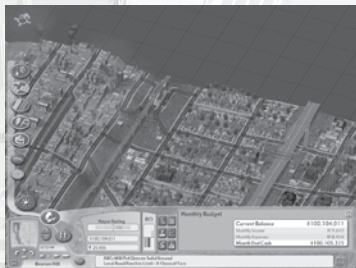

Build Sanitation Systems

Sims can be awfully messy folk, and if you don't provide a means of dealing with that mess, the rubbish can pile up quickly (peeuw!). Fortunately, there are several options at your – ahem – disposal (sorry). You can zone a **Landfill**, build a **Recycling Center**, or construct a **Waste to Energy Plant**.

The **Waste to Energy Plant** generates power as part of the bargain. Landfills may seem to be the most cost-effective choice, but monthly maintenance costs can be quite high. Only zone what you need. Landfills eat rubbish even while they fill. Start small and get a feel for landfill capacity. Landfills are nasty polluters, so keep them away from your nice neighbourhoods – or watch desirability levels for these areas plummet. Don't forget to build roads to your **Landfill**, otherwise the Garbage Trucks can't get there!

You wouldn't think so, but the **Waste to Energy Plant** is an even worse polluter. Energy ain't free, Mayor. The **Recycling Center** is a more environmentally-conscious alternative, but its effect on reducing rubbish in the city is somewhat limited. With any **Sanitation System**, make sure that you have built road connections to your city, or you'll be paying for services you aren't receiving.

Connecting Cities

City Connections can be made with any transportation network, power lines and water pipes. To **make the connection**, choose your desired transportation or utility tool and drag out a network to the edge of your city. When you let go you are presented with the **Create a Connection** dialog.

Click **Accept** and – voila! – the connection is created. A yellow arrow appears on the network line to indicate that a neighbour connection exists. Go and visit your neighbour. You should see the small nub of the network line on the edge of the city that abuts yours, with the yellow arrow indicating connection. Once each side of the connection is connected to the heart of your two cities, they will become intermingled, sharing jobs and residents. As you add amenities to one city, such as power plants, water pumps, and landfills, you can begin to sell those services to the neighbouring cities through **Neighbor Deals**.

Civic Tools

If you want your Sims to thrive in your Shangri-la, there are many things that you, as Mayor, need to provide. Are your citizens protected from criminals and fire? Are you providing a high quality educational system, adequate health care, recreational opportunities and other amenities found in the **Civic Tools** menu? Prudent placement of these services can have great impact on your city's demographics, as well as the desirability of its neighbourhoods.

In most cases, **Civic Buildings** have a radius of effect. For instance, when you build a fire station, you can see its coverage, or service area, indicated by the ring that surrounds the building. Any area that falls outside that radius receives no service. Want more coverage? You can usually enlarge a building's service area by increasing the funding for that building or city department. Or, for the construction-minded, just build another station or hospital to provide more service. Don't worry about destroying existing civic or utilities buildings; the game won't allow you to plop on top of those structures. But plop on top of RCI buildings and they will be destroyed.

Hint: Don't place parks, police stations or fire stations before you can afford them. You won't need them early in your city's development. A good rule of thumb is to build your first fire station when a fire breaks out in your city (just build it quickly).

Build Police Stations & Jails

Crime rates are dependent on several factors. Didn't know you would need to study law enforcement theory to be a Mayor, did you? If you have worked to improve living conditions, increase the average Sim salary and provide ample educational opportunities for your Sims, your city's crime rate decreases. But happy, considerate citizens cannot quell criminal insurgence alone. That's where the police come in. The police help you maintain public order, and respond to various kinds of emergencies. If there is little or no blue-uniformed presence in town, watch the crooks move in.

You may choose between several sizes of police stations to suit the law enforcement needs of your city. Each station varies in size, capacity, cost and coverage area. Stations also come with a set number of squad cars that can be used for emergency dispatches. If your Sims get uppity and start a riot, you need to be sure that you have enough squad cars available for dispatch to quell the melee. As your police force apprehends criminals, they toss them in the jail cells provided with each station. The **Police Kiosk** alone does not have enough room to house criminals. If a police officer on duty apprehends a suspect, the potentially guilty party is taken to the jail cells at the nearest station. When the jails in your police stations are filled to capacity, it may be time to build a **City Jail**. Watch overcrowding in the jails, though – jail riots make everyone in town a little jumpy. If you are experiencing a crime wave, you better build more police stations. Check the **Crime Data View** to see if your efforts are having an effect. Don't lower station funding if crime is barely held in check. Lower funding of a police station significantly lessens officer efficiency in criminal apprehension.

Build Fire Stations

Sorry to say, buildings are inherently flammable (some more so than others – especially industrial buildings). To stop your city from being engulfed in flame, make sure that you have enough fire stations to cover the

developed areas. Like police stations, fire stations have a radius of coverage within which they can subdue any fires that might break out, even before they are reported to the Mayor's Mansion. Outside the coverage area, however, fires can spark up and spread throughout your city. This is where you need to be quick on the draw, Mayor. These fires are doused only if you send out a dispatch order to the fire trucks and planes that come with your stations. See the **Emergency Tools** section for more information on **Dispatch**.

Hint: Wait until a fire breaks out to build your first fire station, then build it near the conflagration. The firemen go into action immediately. This way, you save money by building fire stations only as you need them.

Build Educational Systems

A high quality **Educational System** is critical if you aim to develop your city beyond one dominated by low paying jobs and poor inhabitants. Educate your populace and your city can evolve into a thriving, sophisticated metropolis filled with prosperous Sims and high end jobs. Education also plays a part in reducing your city's crime rate.

To fulfil your city's educational needs, you need to keep tabs on the age of your Sims. Younger Sims require elementary (primary) and high schools, while growing Sims need colleges and universities. Adult Sims prefer the ongoing educational enrichment offered through libraries and museums. You probably won't be able to afford all of these educational institutions right off, so you need to pick and choose what to build, based on which age group predominates in your city. For information about the age of your residents and their education levels, look at the **Education** and **Residential Average Age Data Views**. Also helpful are the graphs for **Education**, **Education by Age** and **Population by Age Graphs**. Schools also have a radius of effect, which is indicated when you build them or click on them for information. Make sure that the Sims that live within the school's service area meet the age criteria for the school. Place schools *only* in your residential neighbourhoods. Schools in commercial and industrial areas will attract no students.

It's a good idea to begin building your **Educational System** early. You can save money by adjusting funding to match the population you're serving. As your population increases, increase funding as well. Otherwise, you may have a strike on your hands when your overworked teachers complain about having too many students.

Hint: A note on education and pollution. Investment in a good educational system and neighbourhoods that are highly desirable for wealthy Sims attract low polluting, high salaried, high tech industries. Over time, dirty industry, manufacturing industry and farms move elsewhere to make way for these new businesses.

Build Hospitals & Clinics

Healthy Sims make for healthy workers. And when your city's health depends on the productivity of your citizens, wellness programs become vital to the big picture. When you improve the health of your Sims, you increase the number of citizens that can hold a job. (Live longer, work longer!) This, in turn, increases the city's tax revenue and lures more businesses to your city. So, Mayor, you can see that it's in your best interest to provide proper health coverage for all of your Sims. Sims feel more secure if there is a health centre near home, so build health facilities in residential zones and don't bother putting them near businesses. Watch your population relative to the funding levels of your **Health Centers**. Health workers get riled and may strike if they feel they are being asked to serve too many patients.

Build Landmarks

A favourite lunch spot in your downtown commercial district just happens to be at the feet of *The Great Sphinx*? Lucky city. Landmarks are expensive to buy and maintain, but add grace and distinction to your city. They also happen to greatly increase desirability for high end commercial businesses (which offer high paying jobs to your citizens).

Build Rewards & Business Deals

You have to create certain civic conditions before you are able to add the buildings found in the **Rewards & Business Deals** menu. If you are successful in building your city, these **Rewards** become available. If you are having difficulties, particularly financial ones, **Business Deals** become available. Even though the buildings are **Rewards**, they cost money to build and sometimes have a monthly maintenance price tag. Usually, though, they offer services and opportunities that greatly add to your city's overall quality of life. **Business Deals** cost nothing and provide monthly income, but – you guessed it – there are often hidden costs (Mayorville: Future Site of the World's Largest Toxic Waste Dump).

Reward Buildings can often be found in multiple locations (the **Hydrogen Plant** is in both **Rewards** and **Power Systems**). Read the tool-tips for these buildings to determine what action you need to take to earn the **Reward**. You can earn **Reward Buildings** in one of two ways: you either reach a specified milestone or threshold in your city, such as a specific population level or Mayor Rating; or you successfully complete one or more **U-Drive-It** missions. When you have earned a **Reward**, or are deemed to be in the position to entertain a **Business Deal**, an **Advisor** presents the reward for your approval and site location.

Build Parks

Who doesn't want to shoot some hoops, or relax during lunch hour in a shady city plaza? If you wish to make an area desirable for residents, commercial businesses, or high tech industry, build a **Park** in the neighbourhood. **Parks** have a small monthly cost for upkeep, but they are worth it. Sims tend to be happier when they have lots of greenery around. If you start to see your residential demand stagnate, you may just need to add a playground or two.

Bulldoze

Mayors may change their minds. And when only a hands-on approach to destruction can do the trick, the **Bulldoze Tool** is right at hand. Click on this tool and then click on the building or other structure that you'd like to see gone from your city. It's as simple as that. But beware! Bulldozing private development in your city – this means any zoned building – has extra "acquisition" costs. You have to buy it before you can destroy it. Think twice before bulldozing that skyscraper – it could be a budget buster!

The **Bulldoze Tool** removes buildings, but not zones. Remove zoned areas by using the **De-zone Tool** in the **Zoning Menu**.

Emergency Tools

You cannot sleep on this job. When your city faces a disaster, Mayor, you need to call your forces into action. Pronto! If a fire has broken out, then send a fire truck or plane to that location. If your Sims are rioting, then calm them down with the steadying influence of your police officers by dispatching a police car or helicopter to the scene.

During the disaster the simulator pauses the simulation to give you a chance to get your bearings – you see a red border around your screen when this occurs. Unless you choose to disable **Auto Go To Disaster** function, the camera takes you right to the scene of the action. If you're having trouble zooming in on that five alarm blaze, click on the **Go To Disaster** button found in **Emergency Tools** menu. It takes you right to the heat.

Be aware, you are unable to save your city when a disaster is in process. Sims like to see that you can deal with whatever emergency has occurred. So exit the game *after* the terrible event has run its course, otherwise you lose whatever development has occurred since your last save.

Mayor Panel

If you are an observant sort of Mayor, you probably look to the **City View** to determine where your city's problems lie. At times, though, you will want an in-depth look at the city. The **Mayor Panel** is there for you, your administrative mightiness. The **Mayor Panel** includes information on your city's population, keeps track of how many Sims are clamouring to move to your city, lets you know how much money you have and where it's being spent, provides up-to-date historical data on a variety of subjects, and gives you access to your all-important **City Advisors**.

Mayor Rating

What kind of Mayor doesn't want to keep Sims happy? Oh. Well, *most* Mayors truly care about the well-being and satisfaction of their citizens – for good reason. Different

sectors of city governance have different approval ratings based on a variety of factors. For a quick peek at the city average of *all* these areas, look to the **Mayor Rating** bar. When the bar is to the left and red, then your Sims may be precariously near to a revolt against you. No one likes to see effigies of themselves burning in front of City Hall. If the bar is to the right and green, then your citizens are very pleased with your work. Congratulations.

There are two types of factors that affect **Mayor Rating**: **Long Term Factors** and **Short Term Factors**.

Long Term Factors:

- Pollution Indices (air, water, waste and radiation)
- Quality of Educational Systems
- Quality of Health Care
- Affordability of Housing
- Crime Rates
- Traffic Flow (specifically commute time and congestion)
- Quality of Park System

If the pollution levels in town are high, your **Mayor Rating** takes a hit. If you have provided quality health care systems, your **Mayor Rating** looks brighter.

Short Term Factors:

The effects of these factors are more ephemeral. Time heals these wounds. These factors include:

- Tax Policy changes
- New Civic Structures
- City Beautification (specifically the planting of trees)
- Fires

If you increase taxes, for a period of time your approval rating drops. Over time, though, your Sims become accustomed to the new policy and the effect on Mayor Rating fades.

\$392,866 **Funds**

One of the most common pitfalls for new Mayors is a tendency towards fiscal irresponsibility. At times, every mayor will be forced to see their budget dip into the red, but you can't keep it there for the long haul. Keep a vigilant eye on your money stores by checking the **Funds** section of the **Mayor Panel**. If you don't, your **Finance Advisor** won't let you forget it.

\$ 3,947 **Population**

One of the best indicators of your success at mayoring is pretty basic: how many people choose to live in your city? The **Population Indicator** in the **Mayor Panel** gives you an up-to-the-minute count of the souls in your city.

RCI Demand Meter

Okay. Hands down, this is the single most important indicator in the **Mayor Panel**. The **RCI Demand Meter** consists of three bars for Residential (R), Commercial (C) and Industrial (I) development. The bars indicate how many people and how many businesses want to move into your town. The higher the bars, the higher the demand for new construction of that zone type. When the bars are low (below the centre bar – which indicates negative demand), you may begin to see abandoned buildings in your city. This is fine if you wanted to develop a ghost town. Use the **RCI Demand Meter** to determine if you should zone more areas for residential, commercial or industrial development.

To get a more detailed view of how demand breaks down for occupant type, click on the **RCI Demand Bars**. Here is a breakdown of **occupant types**:

Occupant Type	Abbreviation	RCI
Low Wealth Residential	R-\$	R
Medium Wealth Residential	R-\$\$	R
High Wealth Residential	R-\$\$\$	R
Low Wealth Commercial Service	CS-\$	C
Medium Wealth Commercial Service	CS-\$\$	C
High Wealth Commercial Service	CS-\$\$\$	C
Medium Wealth Commercial Office	CO-\$\$	C
High Wealth Commercial Office	CO-\$\$\$	C
Agriculture Industry	I-Ag	I

Dirty Industry	I-D	I
Manufacturing Industry	I-M	I
High Tech Industry	I-HT	I

Hint: Sometimes demand may be high for a certain sector, but you aren't seeing development. Check to see that you have zoned enough area for that sort of development, and make sure that the area zoned is also desirable for the occupant type. Finally, check that you have good transportation between your residents and businesses. Traffic congestion can have a dramatic impact on development. If people can't get to work, then development stagnates. Upgrade your transportation systems – streets to roads, roads to avenues and avenues to highways – as needed. This can help keep your city in demand as a place for Sims to live and work.

Hint: You'd like to attract high wealth Sims? Bank on education. Invest in your schools and you start a nice cycle of better educated Sims, who want higher paying jobs, which bring in higher tax revenues and less pollution. And what kind of Sims want to live in an attractive, clean city with good schools and high paying jobs? Well, all kinds. But who can *afford* it?

Building Style Control

Being Mayor has always had its aesthetic side. You set the artistic tone of your city by choosing the style of architecture used in new construction (residential, commercial and industrial). There are four styles of architecture to choose from:

- Chicago 1890
- New York 1940
- Houston 1990
- Euro-Contemporary

By selecting a style in the **Building Style Control** panel you dictate (ah, that's a nice word) the type of architecture for any *new* development. Existing development is not affected. Of course, if the former lack of artistry offends your aesthetic sensibilities, there is always that nice **Bulldoze Tool**. Or perhaps a strategically placed Volcano?

If unity of architectural style leaves you cold, you can select multiple styles and have them cycle after any number of years that you specify. Click on the **Change building style every X years** option and adjust the spinner to set the cycle period.

When you choose this setting, each newly developed part of town develops its own style, giving your city the feel of one that has developed over time. If you are a happy-go-lucky type, an eclectic kind of Mayor, you can have all styles develop simultaneously by selecting the “Build all styles at once” option.

Data Views

As Mayor, you need to keep your fingers on the pulse of your city. Knowing that there are problems is only the first step to being the best Mayor you can be. Before you can address any problem, you need to know the what and where of the situation. It isn't enough to know that your education system is poor. You need to know where the situation is worst, and what factors may be contributing. Statisticians are at your constant beck and call, Mayor. **Data Views** provide you with a slew of diagnostic tools to track current conditions. This data helps you identify where to focus your efforts so that you can improve all aspects of city management.

Fire Hazard

With any construction there are inherent risks of fire. Some buildings are more flammable than others. Abandoned buildings, in particular, are firetraps. Use the **Fire Hazard** data view to pinpoint areas where fire risk is greatest. This view also shows you all city fire stations with their coverage areas. The **Fire Hazard** data view is invaluable when deciding where to build additional fire stations.

Crime

If you have not provided your Sims with well paid jobs and a quality educational system, your crime rate is probably soaring. One way you can combat crime is by building a strong police force. The **Crime** data view shows you where criminal activity clusters, and can help you decide on the most strategic placement for your police stations. As in the **Fire Hazard** data view, existing stations are shown, along with their coverage areas.

Education

Education is truly one of the main building blocks for a successful city. If you want to attract businesses that provide the highest paying jobs for your Sims, you need to have an educated workforce. As noted earlier, a city with highly educated citizens tends to have lower crime rates. A lesson for us all, yes? The intelligence of your Sims is measured by **Education Quotient**, or E.Q. If you know the areas of your city that have the lowest E.Q., you can determine where to place schools, libraries and other education structures for greatest effect. Existing educational structures are shown in this view along with their coverage areas. **Education Quotients** take some time to improve, so don't be frustrated if your data view remains red even after you have built a new school. In a few years the effects begin to show.

Desirability

So you have a high demand for high wealth residential development? Doesn't mean a thing if you don't provide desirable locations for construction. Know which areas of your city are most desirable to help you determine where to zone next. Check out the section on the **RCI Demand Meter** for a breakdown of the 12 occupant types.

Although you can't directly affect the types of occupants that develop in your city, you do have indirect control by affecting the desirability of the zoned areas of your city. The following actions can be taken to improve the desirability for each of these occupant types:

Residential	Commercial Services	Commercial Office	Agricultural Industry	Dirty Industry Manufacturing	High Tech Industry
R-\$	CS-\$				
R-\$\$	CSS\$	CO-\$\$		I-D	
R-\$\$\$	CS-\$\$\$	CO-\$\$\$	I-Ag	I-M	I-HT
Reduce Air Pollution	Reduce Garbage	Reduce Garbage	Reduce Air Pollution	Reduce Crime	Reduce Air Pollution
Reduce Garbage	Reduce Crime	Reduce Crime	Reduce Garbage	Lower Freight Trip Length	Reduce Garbage
Reduce Crime	Reduce Air Pollution	Reduce Air Pollution	Reduce Traffic	Reduce Crime	
Place Schools	Increase Traffic	Place Landmarks	Lower Freight Trip Length		Place Parks
Place Parks	Place Near R	Increase Traffic	Reduce Crime		Lower Freight Trip Length
Place Hospitals	Place Landmarks	Place Near CO			
Lower Commute	Place Near CO				
Reduce Traffic Noise					

For example, you can increase the desirability of a high wealth residential neighbourhood by keeping the pollution down, among other things. Try locating pollution-generating buildings like the Coal Plant away from Residential and Commercial zones. Make sure rubbish isn't piling up by providing a landfill and reduce crime by placing a police station in the neighbourhood.

Water

Although water is not required to get your city started, development is limited to smaller buildings with low and medium wealth occupants if you don't eventually get H2O piped in. Once you are ready for high wealth or medium- and high-density development, you need to put in water for that development to occur. The **Water** data view shows you where your city is adequately supplied with water and where it is dry as a bone.

Power

Nothing in your city develops without power. Nada. Use the **Power** map to see where your city is on the grid, and where Sims are reading by candlelight.

Traffic

If you don't know it by now, provision of an adequate transportation infrastructure for your commuting Sims is critical to city development. If your system is a big, snarly mess, your Sims are unhappily stuck in congested traffic. Accidents, road rage, and perhaps even riots may occur. By using the **Traffic Data View** you can locate your areas of greatest congestion. Relieve the situation by upgrading streets to roads, roads to avenues and avenues to highways. This map is also helpful in diagnosing problems with your public transport systems.

The **Traffic Data View** includes two views: **Congestion vs. Volume** and **Commute Time**.

Congestion vs. Volume

☒ Congestion ☐ Volume The **Congestion** map tells you whether or not your transportation networks are near or over capacity. Use this map to determine where you need to beef up your transportation infrastructure. The

Volume map tells you where the bulk of your traffic is routing itself. While the **Congestion** map indicates where you have capacity problems (read traffic jams, pile ups, standstill), the **Volume** map simply shows you the numbers of travellers using that route. For example, you could have a highway with very little congestion (which would show up green in the **Congestion** map), but very high volume (which would show up blue in the **Volume** map).

The **Volume** map also allows you to see a breakdown of the different types of transportation in your city. Want to see the volume of car vs. bus traffic in your city? This data view is the one for you.

Commute Time

☒ Morning Commute ☐ Evening Commute

Sims don't always use the same route going inbound to work as they do on the way home. This is particularly the case when you have used one-way roads as a traffic control strategy in your city. For this reason, the Traffic map can look very different for the two main **Commute Times**. Switch between morning and evening commute in the **Traffic Map** to see the difference.

Zones

Sometimes it's valuable to see what type of zones you have laid out in your city, particularly if you are growing your city and wish to see where your low vs. high density zones are. The **Zones** map makes your buildings disappear to reveal the underlying zone types at any time.

Land Value

Land Value can influence the wealth levels of Sims that move into your city. Low wealth folks often can't afford to live in areas of high land value. The **Land Value** data view shows where this influence is at its strongest.

Mayor Rating

The **Mayor Rating** bar in the **Mayor Panel** lets you check your *average* approval rating for the whole city. If you want a more localised sense of how your citizens rate your performance, the **Mayor Rating** data view shows which districts like you the most (or which ones revile your very existence).

Residential Average Age

Different areas of your city attract different age groups of Sims. These patterns can dramatically impact the usefulness of your educational structures. Place an elementary school in a neighbourhood of elderly residents, and you're paying for teachers and building maintenance that are not used to capacity. Check out the distribution of age groups in the **Residential Average Age** map to make intelligent decisions about where to build education structures. Be a role model, Mayor! Show those Sims that you can crunch the data with the best of them!

Health

Quality of health care is a major factor in residential desirability, and can have a dramatic impact on the number of working folks in your city. Healthy Sims mean longer living Sims – all of which translates to a larger workforce, which spurs a dramatic increase in the demand for new businesses. This is a somewhat dim view of the value of health, but as Mayor, you must always be interested in your bottom line. Welcome to politics. Use the **Health** data map to check out overall and local health levels. Build clinics and hospitals where they are most needed. The map shows your existing health care system, along with areas of coverage.

Air Pollution

No one likes to live in polluted areas, yet some types of businesses spew out gobs of noxious, smoggy pollution. Know where pollution is rampant, so you know where *not* to put your residential zones.

Hint: Siting dirty business (I-D and I-M) in a neighbouring city enables you to keep pollution away from your “clean” commercial and residential zones. Pollution tends to stay within city limits. You can even go a step further and put your power plants and landfills in the dirty city. This way you keep *all* your polluting buildings in one city. Just be sure to create good connections for services and jobs.

Water Pollution

High water pollution can dramatically decrease the output of your water supply structures. The **Water Pollution** data view helps you decide where to avoid construction of water towers and pumps. This view also facilitates the siting of water treatment plants, which decrease water pollution in areas where it is high.

Garbage

If you aren't providing rubbish removal services, stinky piles of refuse build up all over your city. Funny, but this tends to decrease desirability in those areas. The **Garbage** data view shows you where the build-up has reached Eiffel Tower proportions. Call in the sanitation workers, Mayor!

Radiation

Yup, radiation. Scary. Even the smallest amount of Geiger activation results in the absolute stalling of development. Sims tend to avoid Chernobyl-type situations. Check out the **Radiation** data view to see where to avoid zoning. Of course, if you have successfully avoided construction of a **Toxic Waste Dump** or a nasty little nuclear meltdown, you won't need this map.

Advisor Panel

Your **Advisors** provide you with expertise, timely tips and alert you to impending events. Their feedback is invaluable in helping you understand where your governing attention is needed. Each **Advisor** has his or her own agenda, however, so you may sometimes get conflicting advice. This can lead to some difficult decisions, but this is what being Mayor is all about, right?

If you have chosen to play at the “Easy” level, your advisors get in your face *whenever* there's a problem. If you chose to play at the “Hard” level, they appear only in the most dire of circumstances.

City Planner

The **City Planner** gives you tips on building your city, and guidance on how you can become a very popular mayor. He's also the lucky guy who gets to present you with your **Rewards**.

Finance Advisor

Your **Finance Advisor** keeps you up to date on spending vs. income. She gets very upset if it looks as if your city is heading into the red. If that happens, she tells you what **Business Deals** might get you out of the hole.

Utilities Advisor

Your **Utilities Advisor** gives you information on your water, power and sanitation systems. He also lets you know when capacity problems are looming, and alerts you to **Neighbor Deal** opportunities.

Public Safety Advisor

Your **Public Safety Advisor** keeps you informed of issues regarding crime, police coverage, fire coverage and disasters.

Health & Education Advisor

Your **Health & Education Advisor** updates you on issues concerning the health and educational demands of your citizens.

Transportation Advisor

Your **Transportation Advisor** gives you the low-down on all of your transit systems.

Environmental Advisor

Your **Environmental Advisor** keeps you posted on pollution levels and demands for more greenery.

Advisor Panel Headlines

Click on the head of one of your **Advisors** – you now see a list of headlines from that advisor. Sometimes this list can be veeerrry long. **Advisors** love to advise.

 Expand the view of the headlines by clicking the **Expand** button

 To read the message body of a given headline, click on the headline or on the arrow next to the headline.

 If you are no longer interested in a message, click the “X” next to the headline to delete it.

If you don’t take care of a problem, though, you’re likely to hear about it again. Nag nag nag.

Graphs

Unlike **City Data Views**, **Graphs** depict data city-wide and show you trends over time. As Mayor, you’ll want to know what things were like in your city, five, ten, even 100 years ago. Track historical trends to see if raising funding for your educational system over the years has really had an effect on education levels. **Graphs** provide a healthy list of histograms and line charts that tell you where your city has been, and where it is heading in a variety of categories.

Crime: Is your crime rate going up or down? Check this graph out to determine which way the trend is heading. You can track both the number of crimes and the number of arrests.

Commute Time: Check out how the length of Sims’ commute times has changed from past to present.

Power: This graph provides insight as to when your city’s power usage might exceed its power capacity. Handy when planning for big expenditures like power plants. You see both usage and capacity.

Water: Similar to power, the **Water** graph helps you plan for when your water supplies run low.

Air Pollution: Use the **Air Pollution** graph to see if your environmental policies are working to give your Sims a fresh lungful whenever they take a breath.

Jobs & Population: The **Jobs & Population** graph shows the number of residents and jobs for all 12 occupant types. Check to see if you have enough jobs for your Sims, and if you are attracting the kinds of businesses you desire.

Water Pollution: Is the water crystalline, or is it slowly becoming green ooze?

Garbage: If rubbish starts to build up in your city, the **Garbage** graph registers the trend. Anything above zero means that you have a problem. You’d better find a way to export your rubbish to another city or zone more landfill space for its storage.

Education: Are your Sims getting more erudite or stupiderer? Dumberer? Less intellijent? This graph shows whether or not your educational policies are working.

Education By Age: This histogram shows you the **Educational Quotient** of your citizens by age group. Use this tool to determine if you have focused too much on the education needs of one group at the expense of another.

Population By Age: Is your city dominated by youth, or are you fostering a retirement community? This histogram shows you how the age groups break down in town.

Life Expectancy: If your health care system is lacking, the life expectancy of your Sims is tragically short. This graph shows you whether your Sims are increasingly ripening to a nice old age, or if your city is continuing to suck the life right out of them.

Residential

Average Income: **Average Income** graph tells you whether your Sims are striking it rich or living in poverty.

City Income vs. Expenses: Are you spending your city out of business, or are your miserly ways paying off? Check out the **City Income vs. Expenses** graph to compare your spending versus your earnings. In general, Mayor, try to keep the green line above the red.

Funds: Is your city heading for bankruptcy? The **Funds** graph tells you when the coffers are going to dry up, if you stay on course.

RCI Demand: A more detailed version of the **RCI Meter** is provided in this graph. In fact, this is the graph you see when you click on the **RCI Meter**. This bar graph shows demand levels for all 12 occupant types. Use this graph in conjunction with the **Desirability Map** to know exactly what and where to zone.

Mayor Rating: Check this graph to see if your **Mayor Rating** has improved over time.

Traffic Volume: Are you relying too heavily on the automobile to get your Sims to work? Or have you constructed a well-utilised public transport infrastructure? For a breakdown of traffic volume for a variety of transportation types, check out the new **Traffic Volume** graph.

Budget Panel

Budget management – an area any Mayor knows and loves. Managing your city’s coffers is one of the most important jobs you have as Mayor. Control your expenditures, maintain reasonable tax income and ALWAYS watch your bottom line. Your city can carry debt up to a point, but if the hole gets so deep there is no hope for escape, your Sims will start packing up for greener pastures. The **Budget** panel shows you how much money you have and where it’s going. Use it to make adjustments to your income and spending.

Budget Summary

Monthly Budget	
Current Balance	\$976,752
Monthly Income	\$21,800
Monthly Expenses	\$19,071
Month End Cash	\$979,551

For a quick breakdown of income vs. expenditures take a look at the **Budget Summary**.

 Click the Expand button to get a more detailed view.

Expanded Budget

The **Expanded Budget** view gives a complete breakdown by department of where money is coming in and how it is being spent.

 For a further breakdown within a department or to make budget adjustments in a department, click on any of the **Open Details** buttons.

Many of the department detail panels include sliders for funding adjustment.

 In every case, the white vertical line under the slider indicates 100% funding. Moving the slider all the way to the left reduces funding to 0, while moving the slider to the right of the white line increases funding to over 100%, going as high as 120%. What *does* the police department have on you anyway, Mayor?

 For a description of each budget department, read on. Click on the **Open Details** button to expand the **Taxes** department first.

Taxes

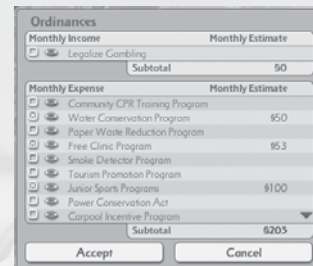

You're the tax man. If your vaults are echoing, one option is to raise taxes in order to increase revenues. Use the **Taxes** window to adjust taxation rates for any of the 12 occupant types. Remember, though, that increasing taxes decreases demand for that type and lowers your Mayor Rating. Your Sims may eventually get over the tax increase and decide they like you again, but demand in that sector takes a long term hit. Even if you bring taxes back down, demand can take a while to recover. It's a good idea to raise taxes only when you are seeing more demand in a certain sector than your city can support.

Enough doom and gloom. Your ability to adjust taxation rates can be used as a powerful tool to influence the type of businesses and residents that move into your city. If you want to keep the rich snobs out of town, simply increase taxes on the fat cats and scare them off. If you want to keep polluting business like Dirty (I-D) and manufacturing (I-M) industries out your city, tax 'em to Timbuktu. They'll stay away.

Hint: Learn how taxes control demand. When you raise taxes, watch demand for that sector decrease. Lower taxes? Increase demand. As Mayor, you can set tax rates for each occupant type, so you can affect the kinds of Sims and businesses that move in. *Affect*, not control. You still need educated workers for high tech industry to develop. Lowering taxes gives a boost if there is initial demand, but it won't work miracles.

Ordinances

Mayors who really understand every little trick in the book often use **Ordinances** to influence the direction of city growth. These little policy gambits carry both costs and benefits when enacted, so use them wisely. For example, if you decide to enact the **Legalize Gambling** ordinance, you do increase your city's revenue, but often at the expense of seeing crime rates rise.

To get more information on each ordinance and its potential effects, click on the  **Open Details** button next to the **Ordinance** title. Specific **Ordinances** become available at different times in your city's development, so keep checking to see what laws you can put in place.

Neighbor Deals

Once you've connected two cities – with roads, power lines or water pipes – you may choose to have one city sell resources to its neighbour. The following requirements need to be met before a **Neighbor Deal** can become available:

- The selling city must have an excess of supply over demand of the resource.
- The purchasing city must be near or above capacity for the resource (i.e. there is a clear, demonstrable need for the resource).
- The purchasing city must have enough money to fund the purchase of the resource for five years.

Once these criteria are met, you can go to the **Neighbor Deals** section of the budget panel to start wheeling and dealing. Your **Utility Advisor** will let you know when conditions are right for a deal.

The cost of a **Neighbor Deal** is automatically determined based on the cost to the city providing the resource, plus a reasonable profit margin. Seems fair, doesn't it? The initial deal is for one year, but is automatically renewed if the original conditions of the deal are still met at the time of renewal.

Hint: Place your power plant and landfill in neighbouring cities, then set up a connection (a power line connection for power and a road connection for landfill) to start a neighbour deal. See the **Connecting Cities** section to learn how connections work. If your city decides to purchase power, rather than generate its own, you can set up a **Neighbor Deal** based on your city needs. This way you pay only for the resources you actually use.

Business Deals

Monthly Income	Monthly Estimate
Business Deals	\$1,750
Federal Prison	\$250
Casino	\$300
Toxic Waste Dump	\$400
Missile Range	\$350
Army Base	\$350
Subtotal	\$3,750

Accept Cancel

Is your city struggling through budget woes? Not to worry, Mayor. Several income generating **Business Deals** can be made available to you. Each deal provides you with a monthly stipend of cold hard cash if your city hosts one of the following structures:

Federal Prison	\$250
Casino	\$300
Army Base	\$350
Area 5.1	\$380
Toxic Waste Dump	\$400
Missile Range	\$450

If criteria for the deal is met (the casino deal only shows up if you've enacted a gambling ordinance), then a new building appears in your **Rewards** catalogue. Placing the building initiates the deal, and the money starts to pour in. If you decide you no longer need to provide a location for these particular businesses, you can always demolish the building (at a hefty price).

Transportation Department

Monthly Income	Monthly Estimate
Road Services	\$0
Toll	\$0
Mass Transit	\$12
Ferry	\$13
Subtotal	\$25

Monthly Expense	Monthly Estimate
Seaports	\$0
Airports	\$750
Road Services	\$334
Traffic	\$11
Boats	\$600
Highways	\$0
Amusement	\$41
Building Maintenance	\$0
Mass Transit	\$127
Subtotal	\$1,543

Accept Cancel

You've been a road-building fool? Your transportation network rivals none. Just so you know – whenever you construct a transportation structure or network, a monthly maintenance cost is added to the expense side of your budget. Ouch! The **Transportation Department** budget detail lets you adjust funding in a variety of categories. **Mass Transit** refers to buses, subways, elevated rail, monorail, passenger and freight trains, and ferries. If you lower funding too far, though, your lovely network may end up in disrepair and trains tend to derail, which can adversely affect traffic conditions. Look around. If you notice a sudden epidemic of potholes, you may want to increase your road maintenance funding. In fact, if you have let things really deteriorate, better increase funding above 100% to cover the costs of repairs. That hurts!

Public Safety Department

Monthly Expense	Monthly Estimate
Fire Dept.	\$500
Police Dept.	\$250
Dept. of Corrections	\$0
Subtotal	\$750

Accept Cancel

The **Public Safety Department** budget includes operating costs for **Police Stations, Fire Stations and Jails**. If you lower the funding at the department level, you diminish budgets for every police building, fire station and jail in town. You may find that your officers aren't catching as many crooks, your fire fighters aren't quite up to scratch, and more and more inmates are escaping from the jails. Lower these budgets only under dire circumstances. You want your institutions of public safety to be in top form.

You can also adjust the funding for fire and police stations on a per station basis. If you decide that one area of your city can stand to live without the most effective police protection, you can lower funding at the local station.

Click on the **Open Details** button for the Police Department. This opens a list of all the police departments in your city, with a funding slider for each station. You can also adjust the funding of an individual station by using the **Query Tool** on that station and adjusting the funding slider in the building's **Dialog Query**.

Health & Education

Monthly Expense	Monthly Estimate
Health	\$1,500
Medical Clinic	\$1,500
Education	\$1,200
Elementary School	\$1,200
School Buses	\$400
Ambulances	\$500
Subtotal	\$5,600

Accept Cancel

You can use the **Health & Education** budget window to adjust funding for your **Schools, Clinics and Hospitals**. Your education and health care facilities are used to varying capacity depending on the size of your city, the density of population in the facility's coverage area or the changing demographics of the neighbourhood.

You can save money by funding these structures according to current needs. When you adjust the bar next to health or education you are adjusting funding for doctors and teachers across all health and school facilities. You can also adjust funding for the number of ambulances or buses serving your systems. When you decide to lower funds for teachers or doctors, the number of students or patients that can be served is reduced. When you adjust bus or ambulance funding, the service area for the school or health centre increases or decreases. In the **Health & Education** budget panel, you can adjust the funding for your education department citywide.

 Click on the **Open Details** button for **Education** to see a list of all the educational structures in your city.

Buildings	Funding	School Bus Budget	Capacity	Monthly Estimate
High School	<input type="range"/>	<input type="range"/>	49,750	\$750
Elementary School	<input type="range"/>	<input type="range"/>	2,500	\$400
Subtotal				\$1,150

Accept Cancel

This allows you to adjust the funding of each structure independently. When you click on the name of each school, the camera repositions to that school's location. In the Health Department budget, you can adjust the funding for the number of doctors and the number of ambulances.

 Click on the **Open Details** button for **Health** to see a list of all the health structures in your city. You are able to adjust funding for each locality, depending on district needs.

For both **Health & Education** structures, you can also adjust the local funding by using the **Query Tool** to bring up its **Dialog Query**.

Utilities

Monthly Expense	Monthly Estimate
Sanitation Dept.	<input type="range"/> \$1,922
Maintenance	90
Pickup and Delivery	\$502
Landfill	\$1,420
 Power	<input type="range"/> \$1,512
Power Line Maintenance	\$10
Waste to Energy Plant	\$1,000
Coal Power Plant	2 \$502
Water Department	<input type="range"/> \$1,131
Subtotal \$4,565	

Accept Cancel

The **Utilities Department** budget contains a summary of spending for the **Power**, **Water** and **Sanitation** departments. You can adjust the overall funding for each of these departments, but be forewarned, once the utility structure is near capacity, it wears down more quickly. Utility buildings have a definite shelf life.

For the **Power Department**, the budgets for each power plant can be adjusted independently.

 Click on the **Open Details** button for **Power** to see a list of all of the power structures in your city. Funding for **Water** and **Sanitation** systems can only be adjusted citywide.

Buildings	Funding	Capacity	Monthly Estimate
Coal Power Plant	<input type="range"/>	2222/5977	\$250
Waste to Energy Plant	<input type="range"/>	1855/4990	\$1,000
Coal Power Plant	<input type="range"/>	2189/5886	\$252
Subtotal			\$1,502

Accept Cancel

You can adjust funding for these structures both here and in their **Dialog Queries**.

City Beautification

Monthly Expense	Monthly Estimate
Landmarks	<input type="range"/> \$90
Tower of London	90
Parks and Recreation	<input type="range"/> \$310
Minor League Stadium	1 \$120
Tennis Court	2 \$30
Small Flower Garden	1 \$5
Small Park Green	2 \$10
Large Park Green	2 \$50
Medium Playground	1 \$25
Subtotal \$400	

Accept Cancel

Both **Landmarks** and **Parks** fall under the category of **City Beautification**. If you lower the funding of these departments, the parks and landmarks in your city begin to look scruffy and their beneficial effects diminish. You can always get things gleaming again by returning their funding to 100%.

Government Budget

Monthly Expense	Monthly Estimate
Building Maintenance	<input type="range"/> \$260
Mayor's House	\$10
Convention Center	\$220
Mayor's Statue	\$30
Subtotal \$260	

Accept Cancel

Many of the **Reward Buildings** you earn cost you a monthly maintenance fee. These fees are listed in the **Government** budget panel. Now before you start grumbling, Mayor, remember that these buildings increase both desirability and Mayor Rating in the area where they are sited. Decrease their funding, and watch their positive impacts diminish.

Take Out a Loan

Current Loans			
Time Remaining	Total	Amount Owed	Payment
10y0m	\$200,000	\$200,000	\$2,479
10y0m	\$110,000	\$110,000	\$1,363
Subtotal			\$3,842
Borrowed			\$310,000
Borrowing Limit			\$2,000,000
Take Out New Loan			
Amount	Term	Monthly Payment	
\$5,000	10y0m	\$61	

Accept New Loan Cancel

If you could just get your hands on a few Simoleons, you know you could turn this city around. Well, Mayor, there is a way. You can always take out a loan. Loans are available for up to \$200,000, and Mayors are allowed to take out up to 10 loans. Ah, but money is never free. Interest rates on these loans are 8.5%, and you must pay back the loan amount with interest on a monthly basis for ten years. So unless you are in a real budget crisis, loans are not the best way to go. It's probably not a good idea to take out a loan in order to build the Louvre next to the Mayor's House. Tempting, though.

City Opinion Polls

For a quick glance at how your city is doing, check out the **Opinion Polls**. These polls provide feedback on city development in six categories. Green bars show you just how positive opinion is in a certain area. Red bars indicate that the situation is negative and show just how bad it is. The arrows on either side of the bars tell you if the situation is improving or deteriorating.

Environment

This bar reflects total pollution levels in your city. To see improvement, reduce air, water and radiation pollution levels by removing high polluters such as dirty industry, farms and toxic waste dumps. Also be sure that you have made provisions to dispose of the rubbish produced by your lovely citizens.

Health

This gives you an overall rating of health care quality and coverage in your city. To bring the rating up, build clinics and hospitals in all of your residential zones, and make sure they have enough funds to serve your Sims' needs.

Safety

Get a quick read on how well your police and fire departments are protecting your city. Want to provide a safer environment for your Sims? Start building police and fire stations in all of your zones, and be sure they have enough moolah to be efficient.

Traffic

This shows you the average road congestion around town. If your transportation networks have a really bad cold, try replacing congested streets and roads with higher capacity transportation networks. You can also improve matters by building a public transport system, and providing plenty of alternate routes for your commuting Sims.

Education

How well do your schools and educational institutions serve your Sims? To raise the level of discourse in city coffeehouses, build schools, libraries and museums in residential zones. As always, once you have built these structures, make sure they are funded well enough to satisfy your Sims. If you manage to keep this opinion poll in the green, the Educational Quotient of your Sims eventually improves.

Land Value

This poll gives you a read on the average land value in your city. To raise land value, build parks, schools, hospitals and other amenities in your residential zones.

News Window

Every good Mayor keeps current with local news and events. To know how your administration is being represented around town, keep an eye on the **News Window**. The two most important messages are constantly displayed here. The messages change according to changing conditions. News messages can come from **Advisors** or your **My Sims**.

- If you wish to see a complete list of these messages, click on the **Open News Window** button.

This brings up the **News** window:

Expanding Messages

- ▶ To read the entire story of a given headline, click on the headline or on the arrow next to the headline.
- ✕ If you are no longer interested in a message, click the X next to the headline to delete it.

Sometimes these messages contain hyperlinks that you can click on to take you to a needed tool or city locale that is relevant to the message. Hyperlinks show up as blue underlined text within the body of the message.

Closing Messages

- Once you've got the gist of the message you can discard it by clicking on the X to the right of the headline.

Urgent Messages

Don't worry, Mayor, you won't miss any *really* important messages. An urgent message window pops up when your immediate attention is needed. Play in "Easy" mode, and you see important but not-so-urgent messages popping up. Not interested in proactive advisors? You prefer to go it solo? You can disable urgent messages in the **Game Options** panel.

My Sim Mode

What is life *really* like in your city? Have you created an upscale manufacturing centre where your Sims contentedly go about their daily lives? Or do your Sims walk in fear to the bus stop because budget crunches have forced you to cut back on public safety expenditures? You can find out, Mayor. In **My Sim** mode, you can import Sims from *The Sims* and direct their lives, listen to the thoughts of *any* Sim on the street, and – in the ultimate demonstration of proactive Mayorhood – use **U-Drive-It** to take control of vehicles in your city to fight crime and solve problems.

Microphone Tool

Want to hear the musings of the "Sim on the street"? Click on the **Microphone tool**, and then click on any Sim in your city to hear their thoughts on the job you're doing. Citizen feedback on local conditions and transportation networks is shown iconically.

U-Drive-It

Not interested in being relegated to a desk job? Well, put on your driving gloves! It's time to get out there and experience life on street level. You are no longer just a spectator in events – you are now part of the outcome, Mayor. Use **U-Drive-It** to take earned vehicles for a leisurely spin in your city. It doesn't stop there. **U-Drive-It** includes stacks of missions where you can help fight crime, or even help *encourage* crime depending on what kind of mayor you are.

You are urgently needed, Mayor! A heart has finally become available, and it is *your* job to pick little Jenny up and get her to the Medical Center pronto. Or perhaps your evilness opts for taking unsuspecting passengers on the last ferry boat ride of their little Sim lives. More of a Wright Brothers-type of leader? Some fields need emergency crop dusting, and you are just the pilot to get it done. Successfully completed missions, whether of the devilish or angelic variety, bring rewards to you and your city of either mayoral prestige or cold hard cash.

Missions

There are over 80 missions involving all the various **U-Drive-It** vehicles. To see a list of the missions and to learn how to trigger each mission, check out the **Mission Chart**. There is one training mission for each type of vehicle (car, tank, boat, aircraft, train). The training missions give you a chance to get familiar with the controls for each vehicle and introduce you to mission play. You can hit **ESC** at any time to cancel out of a **Mission**.

Successful completion of good **Missions** improves your **Mayor Rating**, and may net you a new **Reward Building** (these buildings often add new vehicles to your repertoire as well). To see which missions earn which rewards take a look at the **Mission Chart** in this manual. Rewards for good **Missions** help you build a thriving city. Successful completion of an evil **Mission** brings in the bucks, but your city may experience mayhem, and your local Mayor Rating plummets.

Select a Mission

There are two ways to select a **U-Drive-It Mission**: by clicking on a **Mission Indicator** or by selecting a vehicle from one of the **Earned Vehicle catalogues**.

Mission Indicators

Mission Indicators follow mission-ready vehicles around your city. When you click a **Mission Indicator**, a **Mission Dialog** appears.

Mission Indicators ON/OFF

Tired of **Mission Indicators** clogging your **City View**? Use this tool to turn them off. You can turn them back on at any time. You can always get to **Missions** from the **Earned Vehicle** catalogues, whether or not the **Mission Indicators** are activated.

Earned Vehicle Catalogues

Earned Vehicles

Earned Watercraft

Earned Aircraft

There are many driving experiences to be had in **U-Drive-It**, and you can find them all in one of the **Earned Vehicle catalogues** under **U-Drive-It** in **My Sim Mode**. Click on **Earned Vehicles** to see a list of all land vehicles. Click on **Earned Watercraft** to see (surprise, surprise) all water vehicles, and click on **Earned Aircraft** to see what you can fly. Click on any available vehicle in the catalogue and take it for a **Free Drive**, which allows you to drive, float or fly around your city. Greyed out vehicles are locked and not available for use. To find out how to unlock these vehicles, hover over the vehicle in the catalogue. The **Tooltip** will tell you what building is required. When vehicles in the catalogue have a yellow outline a **Mission** is available. Click on the highlighted vehicle to select a **Mission**.

Hint: You need certain buildings to unlock vehicles for use in **U-Drive-It**. Eyeing that military helicopter? Look at the **Tooltip** to find out what structure you need in your city to support it. Already have the building in your city but still not getting the vehicle? If you are playing with a city from the previous version of *SimCity4*, you'll need to re-build the required building. Sorry, **U-Drive-It** doesn't recognise previous incarnations of the buildings in your city.

Mission Dialog

This window gives you a description of the **Mission** objectives, and reveals your rewards should you be successful. Most vehicles can be used for good or evil. To see a **Mission's** darker (or lighter) side, click **What's my alternative** in the **Mission** dialog. You may accept the **Mission**, Mayor, or you may just want to take this particular vehicle out for a nice little **Free Drive** around town to survey your domain. If you choose to accept a **Mission**, you might find yourself in hot pursuit of thieves, or rushing to heed the directives of an evil genius by orchestrating an "accidental" spill of toxic green goo.

Driving Panel

Once you have entered **U-Drive-It** mode (**Free Drive** or Accepted a **Mission**), you see a green border around the screen. The **Driving Panel** appears in the bottom middle of your screen. **Driving Panels** differ for each type of vehicle. They all display useful information via meters, maps and other indicators. If you're not sure what an indicator means, hover over it for a moment and a **Tooltip** will appear to explain it.

- Want to see more of the screen as you're driving? You can minimise a driving panel by clicking the **"Minimize"** button in the lower left of the panel.

Status Window

Whether you opt for **Free Drive** or decide to try your hand at a **Mission**, you see a **Status Window** in the upper right corner of the screen while you are at the helm. The **Status Window** displays the control keys for each of the vehicles. A complete list of control keys can be found in the **Keyboard Shortcut** section of this manual. Find out how to make the cars go faster, how to get the helicopter off the ground and even how to shoot missiles. With most vehicles you have special controls (starting the siren on the police car or controlling the spotlight on the helicopter). Once you've learned the keys, you can minimise the **Status Window**.

Having so much fun driving that you've forgotten your **Mission** objective? Check the **Status Window** in the upper right corner of the screen. It includes a brief summary of what you need to do. When you are playing a **Mission**, the window shows a brief **Mission** description. Otherwise, it just says **Free Drive**.

Many **Missions** include a time element. The **Status Window** also has a timer showing you how much time you have left. Have you created an efficient transportation network? Hope you don't encounter gridlock as you rush to put out a fire.

Mission Targets

Many **Missions** require you to reach a **Target** (or a series of targets).

Sometimes the **Target** is moving (an absconding car jacker). Sometimes you have to destroy the **Target** (often when a tank is your vehicle of choice). **Targets** are indicated in your **City View** with a bulls-eye. Hopefully these indicators can help to keep you on track as you frantically navigate your city's streets.

Free Drive

Free Drive is available for unlocked vehicles at any time. Choose **Free Drive** to cruise around your city with no objective or time limit. Want to just check things out around town? Take a drive! To cancel **U-Drive-It** mode hit **ESC** at any time.

Mission Chart

Here's a rundown of vehicles, their **Mission** objectives and rewards.

VEHICLE	MISSION NAME	MISSION TRIGGERS	REWARD BUILDINGS UNLOCKED
Land Vehicles			
Any U-Drive-It land vehicle	Road Vehicle Training Mission	"Road Vehicle Training Mission" not completed and Residential > 0	Completing this mission is a pre-requisite for all other land vehicle missions.
Police Car	On the Trail	Police Station > 0 and Commercial > 100 and Residential > 50	Complete the 4 "good" police car missions to unlock Deluxe Police Station
Police Car	Disturbance Reported	Police Station > 0 and Residential > 50	Complete the 4 "good" police car missions to unlock Deluxe Police Station

Yacht	Rare Fish Viewing	Marina > 0	Country Club

My Sims

You created them. You have watched and directed them as they made life choices. Now you can move the Sims you have nurtured into your city! If you have not yet experienced the wonders of *The Sims*, don't fret, *SimCity 4: Deluxe Edition* comes with a slew of Sims just aching to move into your city. But if you have *The Sims™ 1.x* installed on the same machine as *SimCity 4: Deluxe Edition*, you can import Sims from their Sim neighbourhood into a new neighbourhood – yours.

Click on one of the empty slots in the **My Sim Panel** to move a **My Sim** into your city. You can have up to five **My Sims** living in your city at any one time. The **Select A My Sim** panel appears.

Sort Your Sims

Have lots of Sims to choose from? You might find it handy to organise your Sims to simplify things. You can organise by:

Gender

Astrological sign

Alphabetically by name

Importing Sims from The Sims

If you'd like to add to your catalogue of Sims from *The Sims™ 1.x*, you need only click a button. Click the **Download More Sims** button to search your machine for potential Sims to move into your city. Note that your Sims must be placed in a house in a neighbourhood in *The Sims* to become available for import into *SimCity 4: Deluxe Edition*.

If you have imported loads of Sims, you may need more than one page of the **Select A My Sim** panel in which to house all of your potential citizens. No problem. Click on the blue numbers below the heads to switch pages.

When you select a Sim from your list, you can change their name or astrological sign.

Move in a My Sim

Ready to move the lucky candidate into your city? Click the **Move In My Sim** button. You can choose where you'd like your **My Sim** to live. Just move the cursor over a house. The name of the house, its wealth level and valuable information about the conditions in the neighbourhood are displayed. Is this the right dwelling for this particular Sim? Click on the house, and then bring out the welcome wagons for the neighbourhood's new member. Sorry, you can't move **My Sims** into commercial or industrial structures. Sims have not yet got the hang of the whole loft space idea.

When your **My Sim** has moved in, he or she takes on the attributes of the neighbourhood in which they live. If you moved JimBob into a home of high wealth, then he is rolling in cash. If the education system in the neighbourhood is poor, then JimBob has trouble spelling big words.

Navigating the My Sim Panel

The Sims currently living in your city appear on the **My Sim Panel**. If you want more in-depth information on JimBob, click on his image in the **My Sim Panel**. You receive information on what old JimBob thinks of you and your city, where he lives and works, information about his goings-on and tools you can use to help direct JimBob as he explores life on the streets you have created.

My Sim News

Here's where you receive JimBob's feedback about your city – in the **My Sim News** panel. See expanded details of **My Sim News** items by clicking on the **Expand** button. To expand individual news items, click on the headline or the arrow next to the headline. Once you have dealt with a message, delete it by clicking on to the right of the headline.

My Sim Profile

The **My Sim Profile** panel provides you with a plethora of information about your My Sim – age, sign, residence, wealth level, job title, employer, education level and health. The **My Sim Profile** is not only a way to see what JimBob is up to, but is also a quick way to get a read on the state of affairs in his neighbourhood.

Evict This My Sim

My Sims can get whiny, or, heaven forbid, boring. Ready to see the back of JimBob? You can evict him with a click of the **Evict This My Sim** button. Bye-bye, JimBob.

My Sim Transportation

The **Transportation Panel** is the place to go to control the daily comings and goings of JimBob's life – including what he drives, where he works and where he lives.

Dispatch My Sim

Dispatch your **My Sim** to any location in town using the **Dispatch My Sim** paddle. As your **My Sim** travels to the destination, you see their feedback displayed in a thought bubble – yet another way for you to know about your city.

Drive My Sim's Vehicle

Take control of your **My Sim's** car by clicking on the **Drive My Sim's Vehicle** button. Not really carjacking, because you're the Mayor, right? You can take JimBob for a spin around town, or try out a **Mission**, if one's available.

Choose My Sim's Vehicle

Does JimBob drive a sedate sedan or a broken-down heap? Controlling JimBob's life doesn't stop at just driving his car, you even get to choose which car he drives! Available cars for JimBob are based on his wealth level. JimBob may *want* that pricey sports car, but he needs to be living life at the highest wealth level to be able to pay for it.

Choose My Sim's Pedestrian Style

How does your **My Sim** get around when not using a vehicle? Does JimBob walk or rollerblade his way to the bus stop? Does Shirley Sim have a penchant for cycling? Choose here, and watch your Sims travel around the neighbourhood as you have directed.

Change My Sim's House

Tired of JimBob living near the fast food place? Think he needs a change of scenery? You can move your **My Sim** to a new residence at any time.

This is not, however, a way to improve JimBob's financial situation. The wealth level of the new home must match the existing wealth level of your **My Sim**.

Change My Sim's Job

Provide new employment challenges for your **My Sim**. As with domiciles, the new job must match the wealth level of the previous job. If JimBob decides to complete a degree, he may receive a promotion, and may even want a new job and new house. He lets you know.

Options

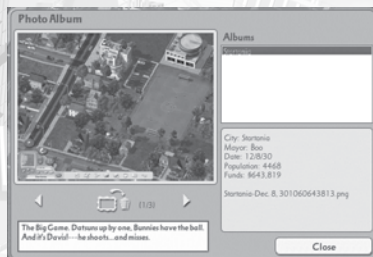

Gameplay **Options** for *SimCity 4: Deluxe Edition* are available in both the **Region** and **City Views**. Choose graphics settings, sound settings and game settings.

Camera Mode

Got a special moment you'd like to capture for posterity? Click on **Camera Mode** to take a snapshot. Once in **Camera Mode**, press the **SPACEBAR** to change the image size. Press **ENTER** to capture the image. Hit **ESCAPE** to exit **Camera Mode**.

Photo Album

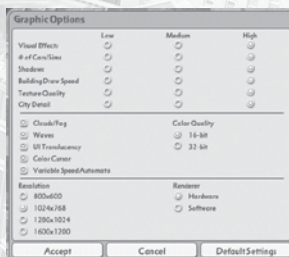

When you take snapshots, images are automatically stored in **Photo Album** organised by city. To peruse your photo collection, click on the **Photo Album** icon. In the **Photo Album Panel**, select an album and cycle through your photographs by clicking on the **Show Next Picture** and **Show Previous Picture** buttons.

Want to add a descriptive label to a photo? Type your text in the “(add descriptions here)” section. Delete images by clicking **Delete Picture**.

Graphic Options

Because PCs come in so many different flavours and configurations, *SimCity 4: Deluxe Edition* offers **Graphics Options** to customise performance for your machine. During installation, the game will set your graphic options to appropriate settings based on your machine specifications. For a machine with minimum specifications, it is highly recommended that you set all these options to low

Visual Effects

Visual Effects can be set to low, medium or high. **Visual Effects** include things like fireworks, explosions, fires, smoke and pollution. Setting this to low limits the number of effects you see as well as their complexity.

of Cars/Sims

Control the number of vehicles and pedestrians you see on the streets of your city.

Shadows

This option regulates the sharpness of shadows cast by buildings and other structures.

Building Draw Speed

SimCity 4: Deluxe Edition constantly purges and loads graphics to conserve memory as you explore different areas of your city. This setting effects how quickly the models and textures are loaded when you change your **City View**. For systems with low memory, set **Building Draw Speed** to the lowest setting.

Texture Quality

Texture Quality controls the rendering of detail in textures of buildings and other structures. Players with machines or graphics cards that have low RAM should set **Texture Quality** to low.

City Detail

Buildings in *SimCity* do not exist in solitude. Lots are adorned with additional structures like swing sets, gardens, statues, shrubbery and lots of other stuff (use your **Query Tool** if you are stumped at an item's identification). Limit the number of additional structures with the **City Detail** setting. For systems with low RAM, how you set **City Detail** has a major impact on how quickly your **City View** changes.

Clouds/Fog

Turn the display of clouds and fog ON/OFF.

Waves

Tired of watching waves lap at your shores? Turn wave effects ON/OFF here.

UI Translucency

This option allows for smooth transitions between the Tool panels and the background. Turn this option ON/OFF here.

Color Cursor

Some graphics cards are unable to display colour cursors. Turn the **Color Cursor** OFF if your graphics card is having difficulties displaying the cursor.

Color Quality

The **Color Quality** setting allows you to set the bit-depth of the display. Choose either 16-bit (65,536 colours) or 32-bit (millions of colours).

Variable Speed Automata

With this option ON, the speed of the cars and Sims will vary based on the simulation speed. At **Cheetah** speed, cars will zoom around the screen. When you pause the simulation, everything will stop. If you turn this option OFF, cars and Sims run at a constant speed regardless of the simulation speed.

Resolution

SimCity 4: Deluxe Edition can be played at a variety of resolutions. The lower the resolution, the faster the game runs. Some display cards and monitors are unable to run at higher resolutions. Check the specifications of your display card and monitor before setting **Resolution** to medium or high.

Renderer

Some video cards do not support **Hardware Rendering**. For those cards, choose the **Software Renderer**.

Default Settings

If you'd like to return all of your settings to the factory defaults, click this button.

Audio Options

You appreciate fine music? Not only can you adjust the volume of music and sound effects, you can also choose the tunes you want to hear while playing.

Music Volume

Adjust **Music Volume** up or down to suit your tastes and hearing levels, or turn the music OFF by unchecking the box to the left.

Sound Volume

Can't quite hear the sound effects? Turn the **Sound Volume** up or down to get the right mix. Uncheck the box to turn sound effects OFF.

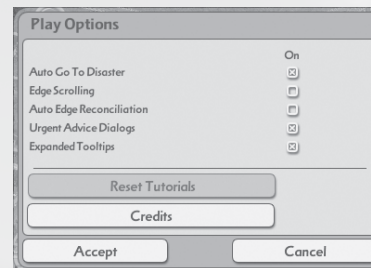

Playlist

You are provided with a list of tunes for your enjoyment during gameplay. Select tunes to create your perfect **Playlist**.

Custom Tunes

Want to be your own DJ? To play custom MP3's, place them in the **Radio\Stations\Mayor\Music** and **Radio\Stations\Region\Music** directories. Music in **Region\Music** plays when you are in the Region, and music in **Mayor\Music** folder plays when you are playing in city view. Check the **Custom Tunes** box. If you want to listen to custom music exclusively, uncheck all tunes in the **Playlist**.

Play Options

Play Options provide ways for you to customise several elements of the game.

Auto Go To Disaster

This option directs the camera to automatically centre on any disaster in your city as it occurs. It's a nice way to alert yourself to tragedies for a quick response. The camera centres only on simulation-based disasters like riots and fires. Disasters from the **Disaster Menu** – meteor showers, volcanoes and the like – require your manipulation to be seen in the **City View**.

Edge Scrolling

Check this option so you can scroll around your city by moving the cursor to the edge of the **City View**.

Auto Edge Reconciliation

When you enter a city, you are automatically asked if you'd like to reconcile the edges of your city to its neighbours. To disable this dialog, uncheck the **Auto Edge Reconciliation** option.

Urgent Advice Dialogs

Normally your advisors display urgent messages for city emergencies and earned buildings and vehicles. Disable this feature by unchecking the **Urgent Advice Dialogs** box. If you do, keep a sharp eye out for disasters.

Expanded Tooltips

When you hover over a *SimCity* tool, both the name of the tool and information about its use appear. To disable the **Tooltips** option and see only the tool name, uncheck the **Expanded Tooltips** box.

Reset Tutorials

If you've played through the tutorials but would like to go through them again, just click the **Reset Tutorials** button. Be careful! If you have continued to develop a city after completing the tutorial, it is replaced with the original tutorial city when you click this button.

Credits

Want to check out the list of happy Maxoids that worked on this game? Click **Credits** to scroll through the list.

Additional City View Options

Save City

Happy with how your city is going? Be sure to save it. City files are saved in My Documents\SimCity 4\Regions\

Exit To Region

Click here to exit your **City View** for the **Region View**.

Quit

It's 3 a.m. and you know that really productive Mayors need to get at least a few hours sleep. Time to click **Quit** and call it a night.

Performance Tips

Problems Running the Game

- Make sure you meet the minimum system requirements for this game and that you have the latest drivers for your video card and sound card installed: For NVIDIA video cards, visit www.nvidia.com to locate and download them. For ATI video cards, visit www.ati.amd.com to locate and download them.
- If you are running the disc version of this game, try reinstalling DirectX from the disc. This is typically found in the DirectX folder on the root of the disc. If you have Internet access, you can visit www.microsoft.com to download the latest version of DirectX.

General Troubleshooting Tips

- If you have the disc version of this game and the AutoPlay screen does not automatically appear for installation/playing, right-click the disc drive icon found in My Computer and select AutoPlay.
- If the game is running slowly, try reducing the quality of some of the video and sound settings from the game's options menu. Reducing the screen resolution can often improve performance.
- For optimum performance when playing, you may like to disable other background tasks (except the EADM application, if applicable) running in Windows.

Customer Support

If you have trouble with this game, EA Technical Support can help.

The *EA Help* file provides solutions and answers to the most common difficulties and questions about how to properly use this product.

To access the EA Help file (with the game already installed):

Windows Vista and Windows 7 users, go to **Start > Games**, right-click the game icon, and select the appropriate support link from the drop-down menu.

For users on earlier versions of Windows, click the **Technical Support** link in the game's directory located in the **Start > Programs** (or **All Programs**) menu.

To access the EA Help file (without the game already installed):

1. Insert the game disc into your DVD-ROM drive.
2. Double-click the My Computer icon on the Desktop. (If the My Computer icon is not visible on your desktop, you may need to click the **Start** button and then click the My Computer icon).
3. Right-click the DVD-ROM drive that has the game disc and then select OPEN.
4. Open the **Support > European Help Files > Electronic_Arts_Technical_Support.htm** file.

If you are still experiencing difficulty after utilizing the information in the EA Help file you can contact EA Technical Support.

EA Customer Support on the Internet

If you have Internet access, be sure to check our EA Technical Support website at:

<http://www.support.electronicarts.co.uk/>

Here you will find a wealth of information on DirectX, game controllers, modems, and networks, as well as information on regular system maintenance and performance. Our website contains up-to-date information on the most common difficulties, game-specific help, and frequently asked questions (FAQs). This is the same information our support technicians use to troubleshoot your performance issues. We keep the support website updated on a daily basis, so please check here first for no-wait solutions.

Support Centre Contact Info

If you require further assistance and would prefer to speak to a technician, telephone our Customer Support team (9am-9pm, Monday-Friday):

Telephone: 0870 243 2435

Note: No hints or codes are available from Support Centre.

Fax: 0870 2413231

Calls charged at national call rates; please consult your telecoms provider for details.

To help us diagnose the problem please generate a DirectX Diagnostic report of your PC before calling us:

Click **Start > Run...** and type **dxdiag**. Click OK, then once the report is complete, Click **SAVE ALL INFORMATION...** and save the report to your Windows Desktop.

Warranty

Note: The following warranties only apply to products sold at retail. These warranties do not apply to products sold online via EA Store or third parties.

Limited Warranty

Electronic Arts warrants to the original purchaser of this computer software product that the recording medium on which the software programs are recorded will be free from defects in materials and workmanship for 12 months from the date of purchase. During such period defective media will be replaced if the original product is returned to Electronic Arts at the address below, together with a dated proof of purchase, a statement describing the defects, the faulty media and your return address. This warranty is in addition to, and does not affect your statutory rights in any way. This warranty does not apply to the software program themselves, which are provided “as is”, nor does it apply to media which has been subject to misuse, damage or excessive wear.

Returns After Warranty

Electronic Arts will replace user-damaged media, current stocks allowing, if the original media is returned with a cheque or postal order for £7.50 per disc, payable to Electronic Arts Ltd. Please remember to include full details of the defect, your name, address and where possible, a daytime telephone number where we can contact you.

Electronic Arts Customer Warranty, PO Box 1096, Guildford, GU1 9JN, United Kingdom.

Electronic Arts excludes any warranty in relation to the Product if it is bought second hand and the consumer is not the first end user of the Product.
